

**PIN DESCRIPTION**

Pin Number	Symbol	Pin name	Input/Output	Function
1	CPOUT	Filter output	Output	Filter output. Connect loop filter to this pin.
2	VSS2	Earthing pin	–	Connect to GND.
3	$\overline{AC}$	Auto-clear input	Input	When “L”, this pin resets the internal IC circuit. Hysteresis input. Built-in pull-up resistor.
4	$\overline{CS}$	Chip select input	Input	This is the chip select input pin, and when serial data transmission is being carried out, it goes to “L.” Hysteresis input. Built-in pull-up resistor.
5	SCK	Serial clock input	Input	When $\overline{CS}$ pin is “L,” S <sub>IN</sub> serial data is taken in when SCK rises. Hysteresis input. Built-in pull-up resistor.
6	SIN	Serial data input	Input	This is the pin for serial input of data and addresses for the display control register and the display data memory. Hysteresis input. Built-in pull-up resistor.
7	TCK	External clock	Input	This is the pin for external clock input.
8	VDD1	Power pin	–	Please connect to +5V with the power pin.
9	P6	Port P6 output	Output	This is the output port.
10	P7	Port P7 output	Output	This is the output port.
11	VSS1	Earthing pin	–	Please connect to GND using circuit earthing pin.
12	P0/BLNK0	Port P0 output	Output	This pin can be toggled between port pin output and BLNK0 signal output.
13	P1/R	Port P1 output	Output	This pin can be toggled between port pin output and R signal output.
14	P2	Port P2 output	Output	This is the output port.
15	P3/G	Port P3 output	Output	This pin can be toggled between port pin output and G signal output.
16	P4	Port P4 output	Output	This is the output port.
17	P5/B	Port P5 output	Output	This pin can be toggled between port pin output and B signal output.
18	HOR	Horizontal synchronous signal input	Input	This pin inputs the horizontal synchronous signal. Hysteresis input.
19	VERT	Vertical synchronous signal input	Input	This pin inputs the vertical synchronous signal. Hysteresis input.
20	VDD2	Power pin	–	Please connect to +5V with the power pin.

SCREEN CHARACTER and PATTERN DISPLAY CONTROLLERS

**MEMORY CONSTITUTION**

Address 000<sub>16</sub> to 11F<sub>16</sub> are assigned to the display RAM, address 120<sub>16</sub> to 128<sub>16</sub> are assigned to the display control registers. The internal circuit is reset and all display control registers (address 120<sub>16</sub> to 128<sub>16</sub>) are set to "0" when the AC pin level is "L". And then, RAM is not erased and be undefined. This memory is consisted of 2

pages : page 0 memory and page 1 memory (their addresses are common), page controlled by DAF bit of each address when writing data. For detail, see "Data input". Memory constitution is shown in Figure 1 and 2.

Fig. 2 Memory constitution (page 1 memory)

Note: Page 0 and page 1 registers are found in their respective pages. For example, HP10 to HP0 of the page 0 memory sets the horizontal display start position of page 0, whereas HP10 to HP0 (same register name) of the page 1 memory sets the horizontal display start position of page 1. Also, registers common to both page 0 and page 1 are found only in the page 0 memory. For example, PTC0 is the control register of the P0 pin and is found only in the page 0 memory.

**SCREEN CONSTITUTION**

The screen lines and rows are determined from each address of the display RAM (page 0 and page 1 are common). The screen constitution is shown in Figure 3.

Row Line	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24

Notes 1. The display RAM is undefined state at the  $\overline{AC}$  pin.

2. The display RAM consists of 2 pages, page 0 and page 1 (common address). The page in which data is written is controlled by the DAF bit. When set to "0", data is written into page 0, whereas when set to "1", data is written into page 1.

**REGISTERS DESCRIPTION**

(1) Address 120<sub>16</sub>

DA	Register	Contents		Remarks															
		Status	Function																
0	DIV0 (Note 3)	0	Set external clock frequency division value of horizontal oscillation frequency.  $N1 = \sum_{n=0}^{10} (DIVn \times 2^n)$ N1 : division value	Set display frequency by division value setting. For details, see REGISTER SUPPLYMENTARY DESCRIPTION (1).  Also, set the display frequency range by registers DIVS0, DIVS1(address 120 <sub>16</sub> ), RSEL0(address 121 <sub>16</sub> ) and RSEL1(address 122 <sub>16</sub> ) in accordance with the display frequency.  Any of this settings above is required only when EXCK1 = 1, EXCK0 = 1.															
		1																	
		0																	
		1																	
		0																	
		1																	
		0																	
		1																	
		0																	
		1																	
B	DIVS0 (Note 3)	0	For setting, see REGISTER SUPPLYMENTARY DESCRIPTION (2).	Set display frequency range.															
C	DIVS1 (Note 3)	1																	
D	VJT (Note 3)	0	It is used to "0", normally.																
		1	Alleviates continuous vertical jitters.																
E	EXCK0 (Note 3)	0	<table border="1"> <thead> <tr> <th>EXCK1</th> <th>EXCK0</th> <th>Display clock input</th> </tr> </thead> <tbody> <tr> <td>0</td> <td>0</td> <td>External synchronous (external clock)</td> </tr> <tr> <td>0</td> <td>1</td> <td>Do not set</td> </tr> <tr> <td>1</td> <td>0</td> <td>Do not set</td> </tr> <tr> <td>1</td> <td>1</td> <td>External synchronous (internal clock)</td> </tr> </tbody> </table>	EXCK1	EXCK0	Display clock input	0	0	External synchronous (external clock)	0	1	Do not set	1	0	Do not set	1	1	External synchronous (internal clock)	Display clock setting See REGISTER SUPPLYMENTARY DESCRIPTION (1) EXCK1 : address123 <sub>16</sub>
EXCK1	EXCK0	Display clock input																	
0	0	External synchronous (external clock)																	
0	1	Do not set																	
1	0	Do not set																	
1	1	External synchronous (internal clock)																	
		1																	

- Notes 1. The mark ○ around the status value means the reset status by the "L" level is input to  $\overline{AC}$  pin.  
 2. The page in which data is written is controlled by the DAF bit. When set to "0", data is written into page 0, whereas when set to "1", data is written into page 1.  
 3. Registers marked with (Note 3) are found only in page 0, therefore the register value does not change when the DAF bit is set to "1".

SCREEN CHARACTER and PATTERN DISPLAY CONTROLLERS

(2) Address 121<sub>16</sub>

DA	Register	Contents		Remarks
		Status	Function

Notes 1. The mark ⓪ around the status value means the reset status by the "L" level is input to  $\overline{AC}$  pin.  
 2. The page in which data is written is controlled by the DAF bit. When set to "0", data is written into page 0, whereas when set to "1", data is written into page 1.  
 3. Registers marked with (Note 3) are found only in page 0, therefore the register value does not change when the DAF bit is set to "1".

		1																	

Notes 1. The mark 0 around the status value means the reset status by the "L" level is input to  $\overline{AC}$  pin.  
 2. The page in which data is written is controlled by the DAF bit. When set to "0", data is written into page 0, whereas when set to "1", data is written into page 1.  
 3. Registers marked with (Note 3) are found only in page 0, therefore the register value does not change when the DAF bit is set to "1".

**REGISTER SUPPLEMENTARY DESCRIPTION**

(1) Setting external clock input and display frequency mode  
 Setting external clock input and display frequency mode (by use of EXCK0 (120<sub>16</sub>), EXCK1 (123<sub>16</sub>) and DIV10 to DIV0 (120<sub>16</sub>), as explained here following.

(a) When (EXCK1, EXCK0) = (0, 0) .....External synchronous 1 (External clock display) ... Fosc = 20 to 70 MHz  
 Input from the TCK pin a constant-period continuous external clock that synchronizes with the horizontal synchronous signal. And input from HOR pin a constant period continuous horizontal synchronous signal.  
 Never stop inputting the clock while displaying.  
 Do not have to set a display frequency because the clock just as it is entered from outside is used as the display clock.

(b) When (EXCK1, EXCK0) = Setting disabled

(c) When (EXCK1, EXCK0) = (1, 0) ..... Setting disabled

(d) When (EXCK1, EXCK0) = (1, 1) .....External synchronous 2 (Internal oscillation clock display) ... Fosc = 20 to 80 MHz  
 Input from the TCK pin a constant-period continuous external clock that synchronizes with the horizontal synchronous signal. And input from HOR pin a constant-period continuous horizontal synchronous signal.

Never stop inputting the clock while displaying.

An internal clock which is in sync with the external input clock is used as the display clock.

Because the display frequency equals the external clock frequency, set N1 (division value) that satisfies the below expressions to DIV10 to DIV0 (address 120<sub>16</sub>) for make the display frequency is equal to the external clock frequency.

$$N1 = \text{external clock frequency} / \text{horizontal synchronous frequency}$$

$$N1 = \sum_{n=0}^{10} 2^n \text{DIV}_n$$

Also, set the display frequency range. (See the next page.)

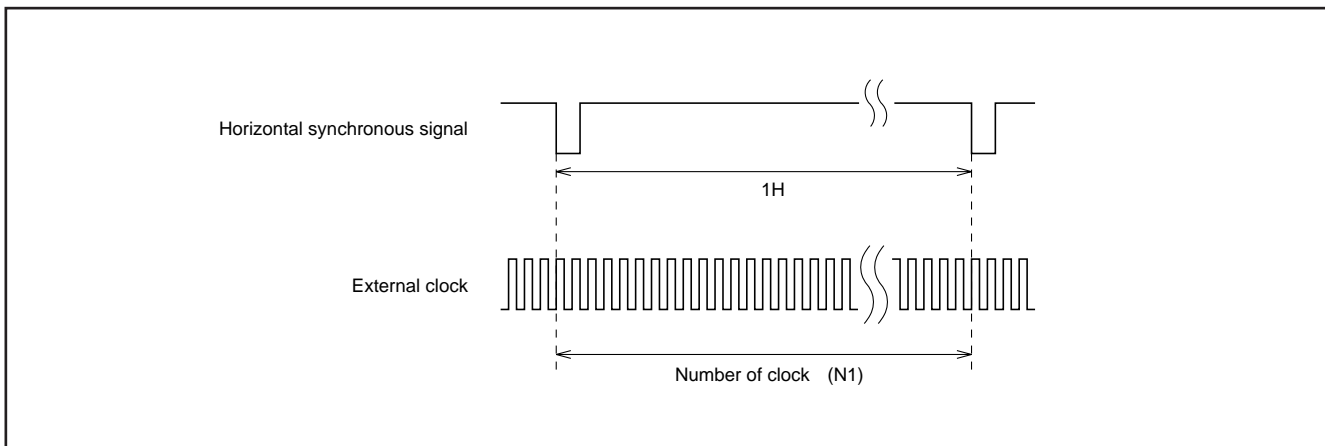

Fig. 4 Example of external clock input

(2) To set display frequency range

Whenever setting display frequency (when EXCK1 = "1", EXCK0 = "1"), always set the display frequency range in accordance with the display frequency. This range is set from DIVS0, DIVS1 (address 120<sub>16</sub>), RSEL0 (address 121<sub>16</sub>) and RSEL1 (address 122<sub>16</sub>). Frequency ranges are given here below.

RSEL1	RSEL0	DIVS1	DIVS0	Display frequency range (MHz)
1	0	0	0	67.0 to 80.0
0	1	0	0	54.0 to 67.0
1	0	0	1	47.0 to 54.0
0	0	0	0	40.0 to 47.0
1	0	1	0	34.0 to 40.0
0	0	0	1	30.0 to 34.0
0	1	1	0	26.0 to 30.0
1	0	1	1	23.0 to 26.0
0	0	1	0	20.0 to 23.0

(3) Notes on setting display frequency

To change external clock (display) frequency or horizontal synchronization frequency, always use the following procedures.

- (a) Turn the display OFF. ... DSPON (address 128<sub>16</sub>) = "0"
- (b) Set the display frequency. ... Set from DIV10 to DIV0, DIVS0, DIVS1 (address 120<sub>16</sub>), RSEL0 (address 121<sub>16</sub>) and RSEL1 (address 122<sub>16</sub>).
- (c) Wait 20 ms while the horizontal synchronization signal and external clock are being input.
- (d) Turn the display ON. ... DSPON (address 128<sub>16</sub>) = "1"

SCREEN CHARACTER and PATTERN DISPLAY CONTROLLERS

**DISPLAY FORM 1**

M35072-XXXFP has the following four display forms.

(1) Blanking mode

Character size

: Blanking same as the character size.

Border size

: Blanking the background as a size from character.

Matrix-outline size

: Blanking the background 12 × 18 dot.

All blanking size

: When set register BCOL to "1", all raster area is blanking.

The display mode and blanking mode can be set line-by-line, as follows, from registers BCOL, BLK1, BLK0 (address 128<sub>16</sub>), DSP0 to DSP11 (address 124<sub>16</sub>).

BCOL	BLK1	BLK0	Line of DSPn = "0"		Line of DSPn = "1"	
			Display mode	Blanking mode	Display mode	Blanking mode
0	0	0	All matrix-outline border display	All matrix-outline size	All matrix-outline display	All matrix-outline size
	0	1	Character display	Character size	Border display	Border size
	1	0	Border display	Border size	All matrix-outline display	All matrix-outlinesize
	1	1	All matrix-outline display	All matrix-outline size	Character display	Character size
1	0	0	All matrix-outline border display	All blanking size	All matrix-outline display	All blanking size
	0	1	Character display		Border display	
	1	0	Border display		All matrix-outline display	
	1	1	All matrix-outline display		Character display	

Fig. 5 Display form

## SCREEN CHARACTER and PATTERN DISPLAY CONTROLLERS

## (2) Shadow display

When border display mode, if set SYAD (address 12816) = "0" to "1", it change to shadow display mode.

Border and shadow display are shown below.

Set shadow display color by BR, BG or BB of display RAM or by register FR, FG and FB (address 12716).

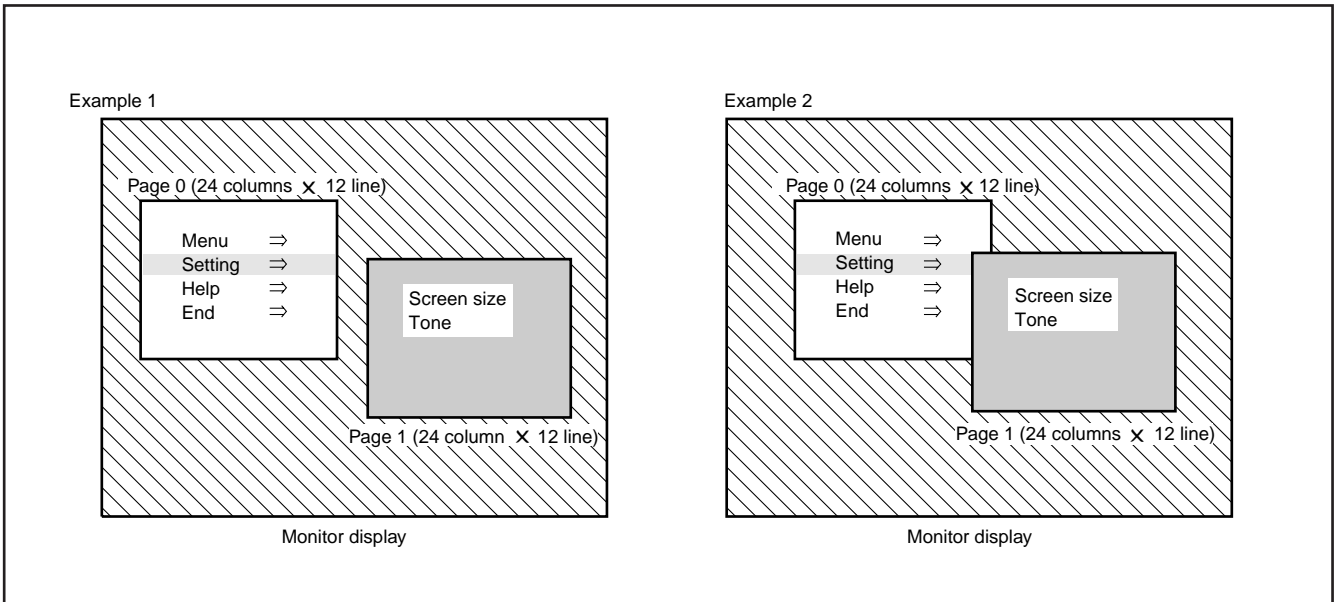

Fig. 6 Border and shadow display

**DISPLAY FORM 2**

This IC can display both page 0 and page 1 at the same time.

Page 0: Set the DAF bit in each addresses to "0".

Page 1: Set the DAF bit in each addresses to "1".

**Fig. 7 Example of 2 pages display**

Example 1: Display position, display size, color, etc., can be freely set for each page, and the 2 pages can be displayed on top of each other or side-by-side.

Example 2: When the display range of the 2 pages overlap on the monitor screen, they can be displayed in the 4 below ways using registers MODE0 (address 127<sub>16</sub>) and MODE1 (address 128<sub>16</sub>) .

MODE1	MODE0	Display mode
0	0	Standard (Page 1 priority)
0	1	AND
1	0	EXOR
1	1	OR

- (1) Standard (page 1 priority) ... Page 1 has priority in overlapping areas. Page 0 is not displayed in those areas.
- (2) AND ..... In overlapping areas, the RGB output of the 2 pages is AND processed and output.
- (3) EXOR ..... In overlapping areas, the RGB output of the 2 pages is EXOR processed and output.
- (4) OR ..... In overlapping areas, the RGB output of the 2 pages is OR processed and output.

**CHARACTER FONT**

Images are composed on a 12 X 18 dot matrix, and characters can be linked vertically and horizontally with other characters to allow the display the continuous symbols.

Character code FF<sub>16</sub> is fixed as a blank without background. Therefore, cannot register a character font in this code.

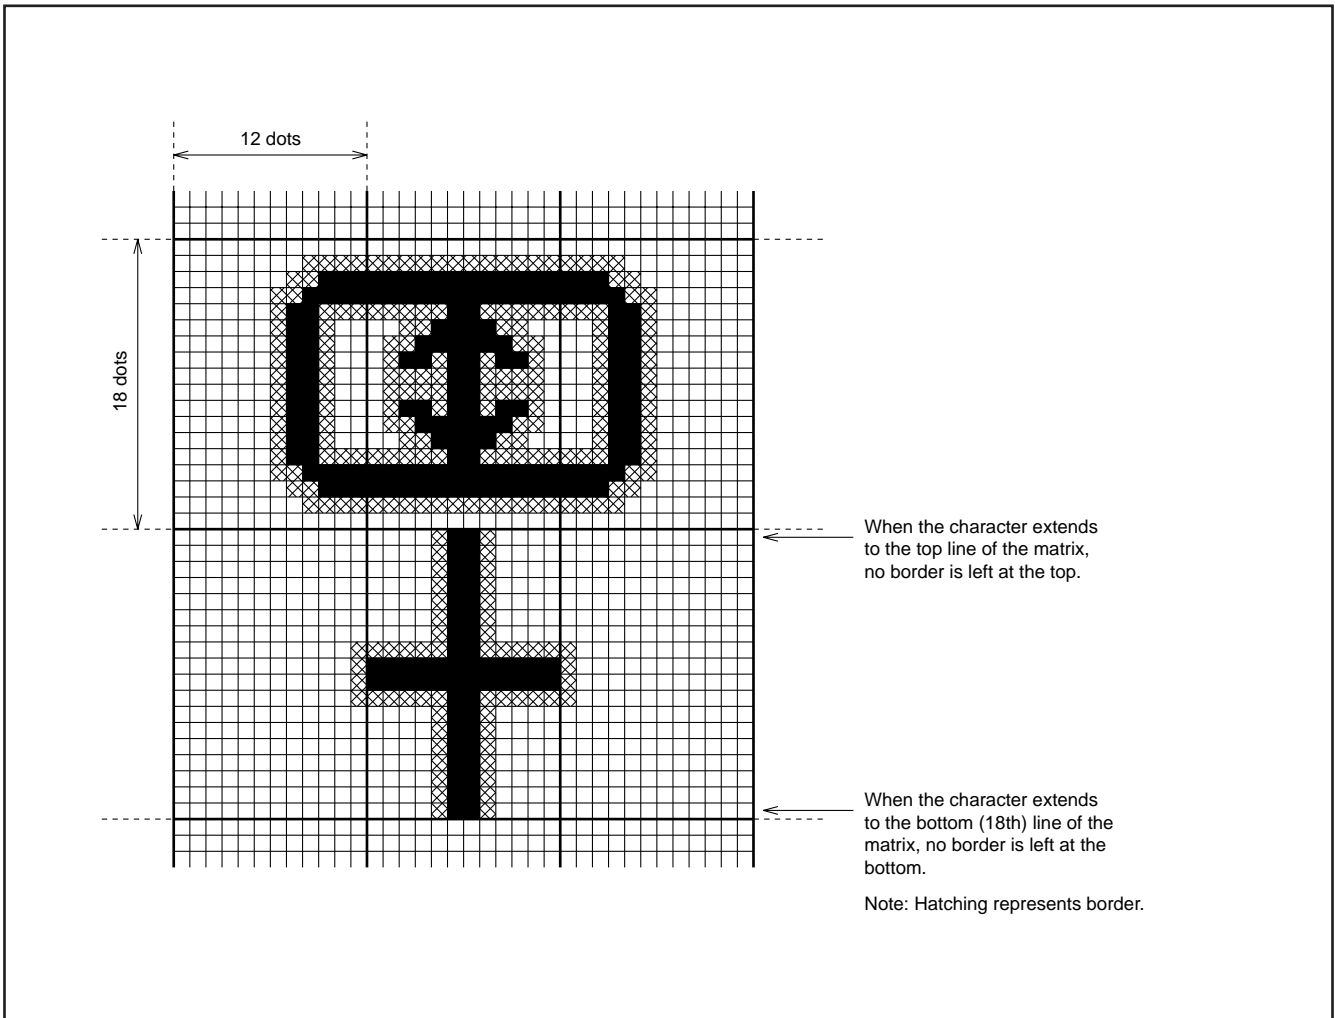

Fig. 8 Example of border display

SCREEN CHARACTER and PATTERN DISPLAY CONTROLLERS

**DATA INPUT EXAMPLE**

Data of display RAM and display control registers can be set by the I<sup>2</sup>C-BUS serial input function. Example of data setting is shown in Figure 9 (at EXCK0 = "1", EXCK1 = "1" setting).

Notes 1 : The page in which data is written is controlled by the address. To write data into page 0, set "0". To write data into page 1, set "1".  
 2 : Input a continuous clock of constant period from the TCK pin. Also, input a horizontal synchronous signal into the HOR pin and a vertical synchronous signal into the VERT pin.  
 3 : Matrix-outline display in this data.

Fig. 9 Example of data setting

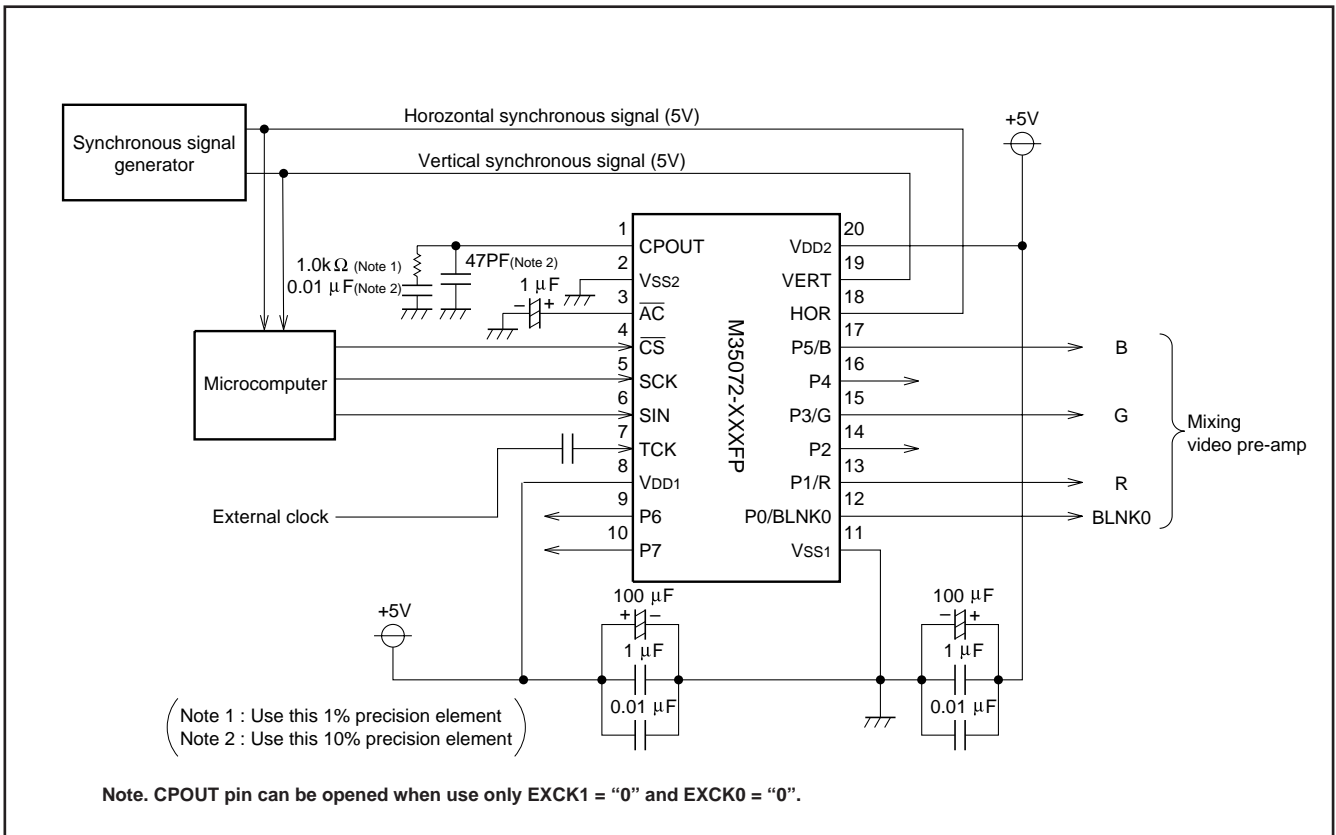

Fig. 10 Example of the M35072-XXXFP peripheral circuit (At EXCK1 = "1", EXCK0 = "1")

**SERIAL DATA INPUT TIMING**

- (1) Serial data should be input with the LSB first.
- (2) The address consists of 16 bits.
- (3) The data consists of 16 bits.
- (4) The 16 bits in the SCK after the  $\overline{CS}$  signal has fallen are the address, and for succeeding input data, the address is incremented every 16 bits. Therefore, it is not necessary to input the address from the second data.

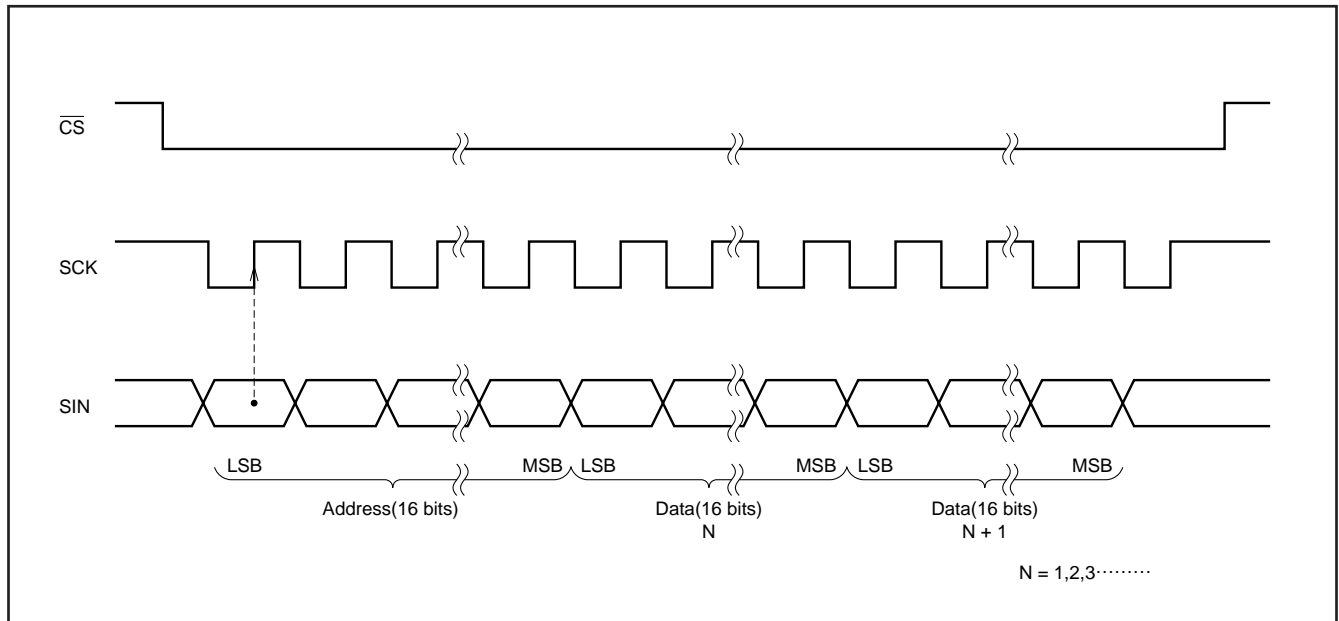

Fig. 11 Serial input timing

**TIMING REQUIREMENTS** ( $T_a = -20^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$ ,  $V_{DD} = 5 \pm 0.25\text{V}$ , unless otherwise noted)

Data input

Symbol	Parameter	Limits			Unit	Remarks
		Min.	Typ.	Max.		
$t_w(\text{SCK})$	SCK width	200	—	—	ns	See Figure 12
$t_{su}(\overline{\text{CS}})$	$\overline{\text{CS}}$ setup time	200	—	—	ns	
$t_h(\overline{\text{CS}})$	$\overline{\text{CS}}$ hold time	2	—	—	$\mu\text{s}$	
$t_{su}(\text{SIN})$	SIN setup time	200	—	—	ns	
$t_h(\text{SIN})$	SIN hold time	200	—	—	ns	
$t_{word}$	1 word writing time	10	—	—	$\mu\text{s}$	

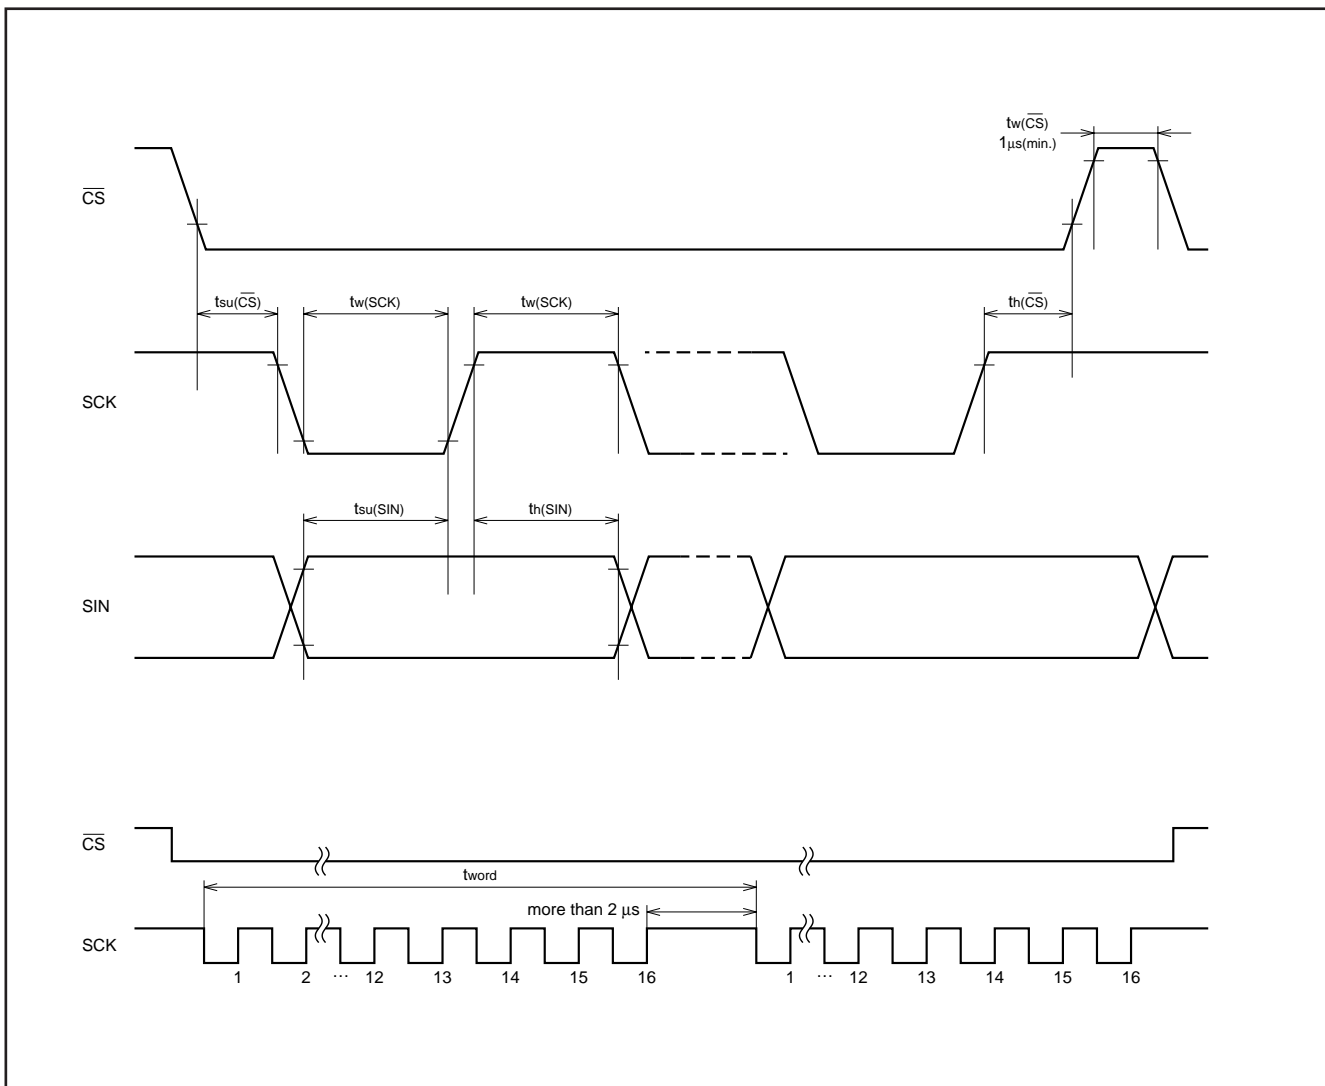

Fig. 12 Serial input timing requirements

SCREEN CHARACTER and PATTERN DISPLAY CONTROLLERS

**ABSOLUTE MAXIMUM RATINGS** ( $V_{DD} = 5.00V$ ,  $T_a = -20$  to  $+85^\circ C$ , unless otherwise noted)

Symbol	Parameter	Conditions	Ratings	Unit
$V_{DD}$	Supply voltage	With respect to $V_{SS}$ .	-0.3 to +6.0	V
$V_I$	Input voltage		$V_{SS} - 0.3 \leq V_I \leq V_{DD} + 0.3$	V
$V_O$	Output voltage		$V_{SS} \leq V_O \leq V_{DD}$	V
$P_d$	Power dissipation	$T_a = +25^\circ C$	+300	mW
$T_{opr}$	Operating temperature		-20 to +85	$^\circ C$
$T_{stg}$	Storage temperature		-40 to +125	$^\circ C$

**RECOMMENDED OPERATING CONDITIONS** ( $V_{DD} = 5.00V$ ,  $T_a = -20$  to  $+85^\circ C$ , unless otherwise noted)

Symbol	Parameter		Limits			Unit
			Min.	Typ.	Max.	
$V_{DD}$	Supply voltage		4.75	5.0	5.25	V
$V_{IH}$	"H" level input voltage	SIN, SCK, $\overline{CS}$ , $\overline{AC}$ , HOR, VERT	$0.8 \times V_{DD}$	$V_{DD}$	$V_{DD}$	V
$V_{IL}$	"L" level input voltage	SIN, SCK, $\overline{CS}$ , $\overline{AC}$ , HOR, VERT	0	0	$0.2 \times V_{DD}$	V
$f_{OSC}$	Oscillating frequency for display		20.0	—	80.0	MHz
H.sync	Horizontal synchronous signal input frequency		15.0	—	130.0	kHz

**ELECTRICAL CHARACTERISTICS** ( $V_{DD} = 5.00V$ ,  $T_a = 25^\circ C$ , unless otherwise noted)

Symbol	Parameter		Test conditions	Limits			Unit
				Min.	Typ.	Max.	
$V_{DD}$	Supply voltage		$T_a = -20$ to $+85^\circ C$	4.75	5.0	5.25	V
$I_{DD}$	Supply current		$V_{DD} = 5.00V$	—	40	60	mA
$V_{OH}$	"H" level output voltage	P0 to P7 (Note1)	$V_{DD} = 4.75V$ , $I_{OH} = -0.4mA$	3.5	—	—	V
		CPOUT	$V_{DD} = 4.75V$ , $I_{OH} = -0.05mA$				
$V_{OL}$	"L" level output voltage	P0 to P7 (Note2)	$V_{DD} = 4.75V$ , $I_{OL} = 0.4mA$	—	—	0.4	V
		CPOUT	$V_{DD} = 4.75V$ , $I_{OL} = 0.05mA$				
$R_I$	Pull-up resistance $\overline{AC}$ , $\overline{CS}$ , SCK, SIN		$V_{DD} = 5.00V$	10	30	100	$k\Omega$
$V_{TCK}$	External clock input width		$4.75V \leq V_{DD} \leq 5.25V$	$0.6 \times V_{DD}$	—	$0.9 \times V_{DD}$	V

Notes 1. The current from the IC must not exceed -0.4 mA/port at any of the port pins (P0 to P7).

2. The current flowing into the IC must not exceed 0.4 mA/port at any of port pins (P0 to P7).

**NOTE FOR SUPPLYING POWER**

(1)Timing of power supplying to  $\overline{AC}$  pin

The internal circuit of M35072-XXXFP is reset when the level of the auto clear input pin  $\overline{AC}$  is "L". This pin is hysteresis input with the pull-up resistor.

The timing about power supplying of  $\overline{AC}$  pin is shown in Figure 16.

After supplying the power ( $V_{DD}$  and  $V_{SS}$ ) to M35072-XXXFP and the supply voltage becomes more than  $0.8 \times V_{DD}$ , it needs to keep  $V_{IL}$  time;  $t_w$  of the  $\overline{AC}$  pin for more than 1ms.

Start inputting from microcomputer after  $\overline{AC}$  pin supply voltage becomes more than  $0.8 \times V_{DD}$  and keeping 200ms wait time.

(2)Timing of power supplying to  $V_{DD1}$  and  $V_{DD2}$ .

Supply power to  $V_{DD1}$  and  $V_{DD2}$  at the same time.

Fig. 13 Timing of power supplying to  $\overline{AC}$  pin

**PRECAUTION FOR USE**

Notes on noise and latch-up

In order to avoid noise and latch-up, connect a bypass capacitor ( $\approx 0.1\mu F$ ) directly between the  $V_{DD1}$  pin and  $V_{SS1}$  pin, and the  $V_{DD2}$  pin and  $V_{SS2}$  pin using a heavy wire.

Note for waveform timing of the horizontal signals to the HOR pin

Set horizontal synchronous signal edge\* waveform timing to under 5ns and input to HOR pin.

Set only the side which set by B/F register waveform timing under 5ns and input to HOR pin.

\*: Set front porch edge or back porch edge by B/F register.

**DATA REQUIRED FOR MASK ROM ORDERING**

Please send the following data for mask orders.

- (1) M35072-XXXFP mask ROM order confirmation form
- (2) 20P2Q-A mask specification form
- (3) ROM data (EPROM 3 sets)
- (4) Floppy disks containing the character font generating program + character data

**STANDARD ROM TYPE : M35072-002FP**

M35072-002FP is a standard ROM type of M35072-XXXFP.  
The character patterns for 0 page are fixed to the contents of Figure 14 to 17, the character patterns for page 1 are fixed to the contents of Figure 18 to 21.

**MASK ROM ORDER CONFIRMATION FORM  
SCREEN DISPLAY IC M35072-XXXFP  
MITSUBISHI ELECTRIC**

Receipt	Data :	
	Section head signature	Supervisor signature

Note : Please fill in all items marked \*, □.

Customer	Company name	TEL ( )	Issuance signature	Approval	Verification	Framing
	Data issued	Date :				

Program version name	M072R .V
----------------------	----------

※ Remarks

- Return the Character Font Preparation Program after use.
- Three EPROMs are required. Specify the type of EPROMs submitted. (All the three EPROMs must be same types. Check @ in the appropriate box.)

27512

- (1) The font data prepared by the Character Font Preparation Program is saved as a binary type object file (addresses 0000h to FFFFh) and a hex type object file . Three sets of these EPROMs are required.
- (2) Attach the erase protect seals on three EPROMs. Each seal bears the type name (M35072), and ROM No. (-...FP).

- Write the checksum code (hexadecimal notation) for entire EPROM areas.

Checksum 

--	--	--	--

- Select the marking type (Check @ in the appropriate box).

Special Mark  ..... Fill in the 20P2Q-A Mark Specification Form and attach to the Mask ROM Order Confirmation Form.

Standard Mark  ..... No writing is required.

- The package type

..... SSOP type(M35072-XXXFP)

**20P2Q-A (20-PIN SHRINK SOP) MARK SPECIFICATION FORM**

Mitsubishi IC catalog name

Please choose one of the marking types below (A, B, C), and enter the Mitsubishi catalog name and the special mark (if needed).

**A. Standard Mitsubishi Mark**

**B. Customer's Parts Number + Mitsubishi catalog name**

Customer's Parts Number  
 Note : The fonts and size of characters are standard Mitsubishi type.  
 Note1 : The mark field should be written right aligned.  
 2 : The fonts and size of characters are standard Mitsubishi type.  
 3 : Customer's Parts Number can be up to 10 characters : Only 0 ~ 9, A ~ Z, +, -, /, (, ), &, ©, • (periods), (commas) are usable.

**C. Special Mark Required**

Note1 : If the Special Mark is to be Printed, indicate the desired layout of the mark in the left figure. The layout will be duplicated as close as possible. Mitsubishi lot number (4-digit) and Mask ROM number (3-digit) are always marked.  
 2 : If the customer's trade mark logo must be used in the Special Mark, check the box below. Please submit a clean original of the logo. For the new special character fonts a clean font original (ideally logo drawing) must be submitted.

Special logo required

Special Mark (Customer's Trade Mark)  
 Mitsubishi IC catalog name

**Keep safety first in your circuit designs!**

- Mitsubishi Electric Corporation puts the maximum effort into making semiconductor products better and more reliable, but there is always the possibility that trouble may occur with them. Trouble with semiconductors may lead to personal injury, fire or property damage. Remember to give due consideration to safety when making your circuit designs, with appropriate measures such as (i) placement of substitutive, auxiliary circuits, (ii) use of non-flammable material or (iii) prevention against any malfunction or mishap.

**Notes regarding these materials**

- These materials are intended as a reference to assist our customers in the selection of the Mitsubishi semiconductor product best suited to the customer's application; they do not convey any license under any intellectual property rights, or any other rights, belonging to Mitsubishi Electric Corporation or a third party.
- Mitsubishi Electric Corporation assumes no responsibility for any damage, or infringement of any third-party's rights, originating in the use of any product data, diagrams, charts or circuit application examples contained in these materials.
- All information contained in these materials, including product data, diagrams and charts, represent information on products at the time of publication of these materials, and are subject to change by Mitsubishi Electric Corporation without notice due to product improvements or other reasons. It is therefore recommended that customers contact Mitsubishi Electric Corporation or an authorized Mitsubishi Semiconductor product distributor for the latest product information before purchasing a product listed herein.
- Mitsubishi Electric Corporation semiconductors are not designed or manufactured for use in a device or system that is used under circumstances in which human life is potentially at stake. Please contact Mitsubishi Electric Corporation or an authorized Mitsubishi Semiconductor product distributor when considering the use of a product contained herein for any specific purposes, such as apparatus or systems for transportation, vehicular, medical, aerospace, nuclear, or undersea repeater use.
- The prior written approval of Mitsubishi Electric Corporation is necessary to reprint or reproduce in whole or in part these materials.
- If these products or technologies are subject to the Japanese export control restrictions, they must be exported under a license from the Japanese government and cannot be imported into a country other than the approved destination.  
Any diversion or reexport contrary to the export control laws and regulations of Japan and/or the country of destination is prohibited.
- Please contact Mitsubishi Electric Corporation or an authorized Mitsubishi Semiconductor product distributor for further details on these materials or the products contained therein.
