

To all our customers

---

## **Regarding the change of names mentioned in the document, such as Mitsubishi Electric and Mitsubishi XX, to Renesas Technology Corp.**

---

The semiconductor operations of Hitachi and Mitsubishi Electric were transferred to Renesas Technology Corporation on April 1st 2003. These operations include microcomputer, logic, analog and discrete devices, and memory chips other than DRAMs (flash memory, SRAMs etc.) Accordingly, although Mitsubishi Electric, Mitsubishi Electric Corporation, Mitsubishi Semiconductors, and other Mitsubishi brand names are mentioned in the document, these names have in fact all been changed to Renesas Technology Corp. Thank you for your understanding. Except for our corporate trademark, logo and corporate statement, no changes whatsoever have been made to the contents of the document, and these changes do not constitute any alteration to the contents of the document itself.

Note : Mitsubishi Electric will continue the business operations of high frequency & optical devices and power devices.

## 8388608-BIT (524288-WORD BY 16-BIT) CMOS STATIC RAM

### DESCRIPTION

The M5M5W816TP is a family of low voltage 8-Mbit static RAMs organized as 524288-words by 16-bit, fabricated by Mitsubishi's high-performance 0.18 $\mu$ m CMOS technology.

The M5M5W816TP is suitable for memory applications where a simple interfacing, battery operating and battery backup are the important design objectives.

The M5M5W816TP is packaged in a 44pin thin small outline mount device, with the outline of 400mil TSOP TYPE(II). It gives the best solution for a compaction of mounting area as well as flexibility of wiring pattern of printed circuit boards.

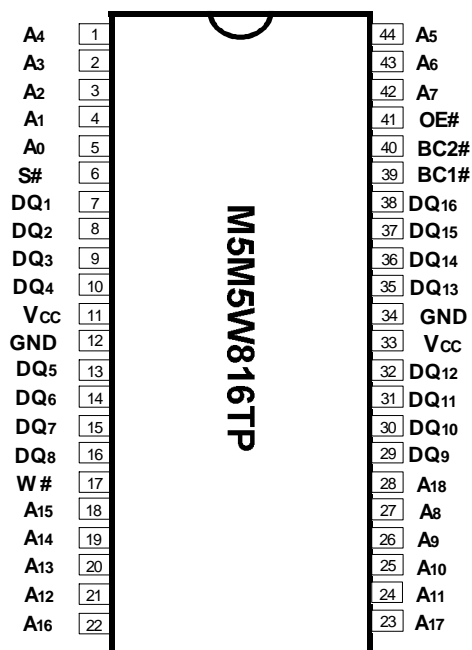

### FEATURES

- Single 2.7~3.6V power supply
- Small stand-by current: 0.1 $\mu$ A (2.0V, typ.)
- No clocks, No refresh
- Data retention supply voltage =2.0V
- All inputs and outputs are TTL compatible.
- Easy memory expansion by S#, BC1# and BC2#
- Common Data I/O
- Three-state outputs: OR-tie capability
- OE# prevents data contention in the I/O bus
- Process technology: 0.18 $\mu$ m CMOS
- Package: 44pin 400mil TSOP TYPE(II)

## 8388608-BIT (524288-WORD BY 16-BIT) CMOS STATIC RAM

### FUNCTION

The M5M5W816TP is organized as 524288-words by 16-bit. These devices operate on a single +2.7~3.6V power supply, and are directly TTL compatible to both input and output. Its fully static circuit needs no clocks and no refresh, and makes it useful.

The operation mode are determined by a combination of the device control inputs BC1# , BC2# , S# , W# and OE#. Each mode is summarized in the function table.

A write operation is executed whenever the low level W# overlaps with the low level BC1# and/or BC2# and the low level S#. The address(A0~A18) must be set up before the write cycle and must be stable during the entire cycle.

A read operation is executed by setting W# at a high level and OE# at a low level while BC1# and/or BC2# and S# are in an active state(S#=L).

When setting BC1# at the high level and other pins are in an active stage , upper-byte are in a selectable mode in which both reading and writing are enabled, and lower-byte are in a non-selectable mode. And when setting BC2# at a high level and other pins are in an active stage, lower-byte are in a selectable mode and upper-byte are in a non-selectable mode.

When setting BC1# and BC2# at a high level or S# at a high level, the chips are in a non-selectable mode in which both reading and writing are disabled. In this mode, the output stage is in a high-impedance state, allowing OR-tie with other chips and memory expansion by BC1#, BC2# and S#.

The power supply current is reduced as low as 0.1μA(25°C, typical), and the memory data can be held at +2.0V power supply, enabling battery back-up operation during power failure or power-down operation in the non-selected mode.

### FUNCTION TABLE

| S# | BC1# | BC2# | W# | OE# | Mode          | DQ1~8  | DQ9~16 | I <sub>cc</sub> |
|----|------|------|----|-----|---------------|--------|--------|-----------------|

MITSUBISHI LSIs

8388608-BIT (524288-WORD BY 16-BIT) CMOS STATIC RAM

Note 3: Hatching indicates the state is "don't care".

Note 4: A Write occurs during  $S\#$  low overlaps  $BC1\#$  and/or  $BC2\#$  low and  $W\#$  low.

Note 5: When the falling edge of  $W\#$  is simultaneously or prior to the falling edge of  $BC1\#$  and/or  $BC2\#$  or the falling edge of  $S\#$ , the outputs are maintained in the high impedance state.

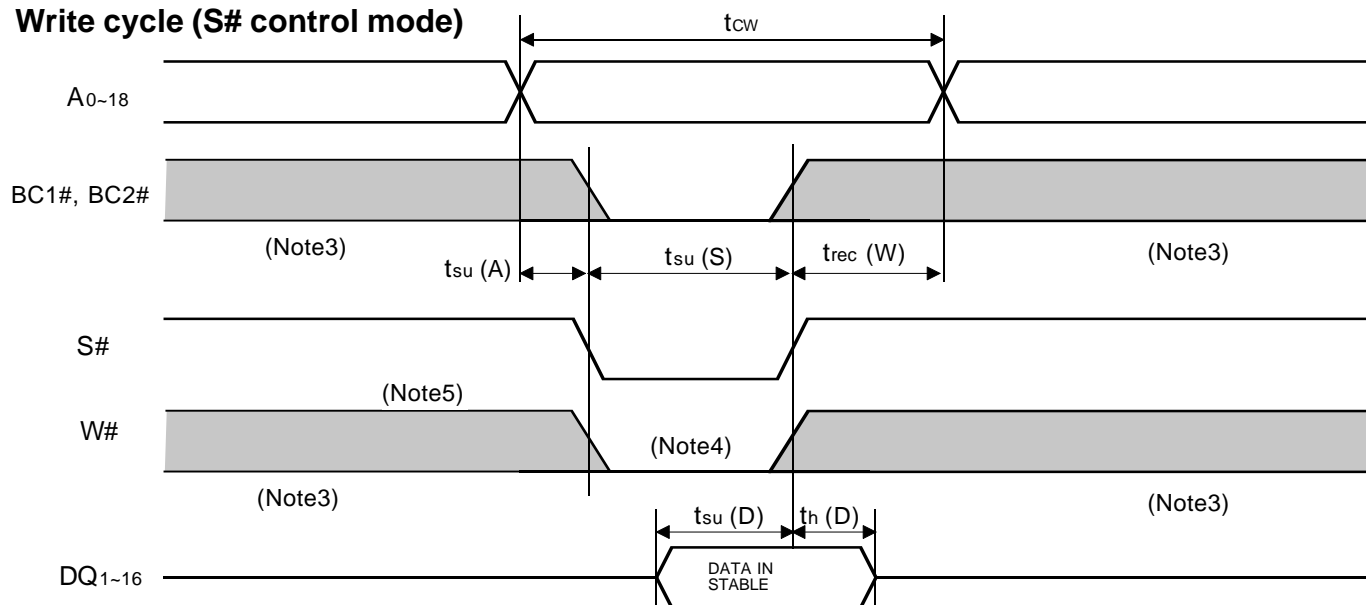

Note 6: Don't apply inverted phase signal externally when DQ pin is in output mode.

| I <sub>CC</sub> (PD) | Power down supply current      | V <sub>CC</sub> =2.0V<br>(1) S# ≥ V <sub>CC</sub> - 0.2V,<br>other inputs = 0 ~ V <sub>CC</sub><br>(2) BC1# and BC2# ≥ V <sub>CC</sub> - 0.2V<br>S# ≤ 0.2V<br>other inputs = 0 ~ V <sub>CC</sub> | ~ +25°C | -                    | 0.1 | 1.5   | μA |
|                      |                                |  | ~ +40°C | -                    | 0.2 | 3     |    |
|                      |                                |  | ~ +70°C | -                    | -   | 15    |    |
|                      |                                |  | ~ +85°C | -                    | -   | 30    |    |

Note 7: Typical parameter of I<sub>CC</sub>(PD) indicates the value for the center of distribution at 2.0V, and not 100% tested.

### (2) TIMING REQUIREMENTS

| Symbol                | Parameter                | Test conditions | Limits |     |     | Units |
|-----------------------|--------------------------|-----------------|--------|-----|-----|-------|
|                       |                          |                 | Min    | Typ | Max |       |
| t <sub>SU</sub> (PD)  | Power down set up time   |                 | 0      |     |     | ns    |
| t <sub>REC</sub> (PD) | Power down recovery time |                 | 5      |     |     | ms    |

### (3) TIMING DIAGRAM

**BC# control mode** On the BC# control mode, the level of S# must be fixed at S# ≥ V<sub>CC</sub>-0.2V or S# ≤ 0.2V.

**S# control mode**

## **Keep safety first in your circuit designs!**

Mitsubishi Electric Corporation puts the maximum effort into making semiconductor products better and more reliable, but there is always the possibility that trouble may occur with them. Trouble with semiconductors may lead to personal injury, fire or property damage. Remember to give due consideration to safety when making your circuit designs, with appropriate measures such as (i) placement of substitutive, auxiliary circuits, (ii) use of non-flammable material or (iii) prevention against any malfunction or mishap.

## **Notes regarding these materials**

These materials are intended as a reference to assist our customers in the selection of the Mitsubishi semiconductor product best suited to the customer's application; they do not convey any license under any intellectual property rights, or any other rights, belonging to Mitsubishi Electric Corporation or a third party.

Mitsubishi Electric Corporation assumes no responsibility for any damage, or infringement of any third-party's rights, originating in the use of any product data, diagrams, charts, programs, algorithms, or circuit application examples contained in these materials.

All information contained in these materials, including product data, diagrams, charts, programs and algorithms represents information on products at the time of publication of these materials, and are subject to change by Mitsubishi Electric Corporation without notice due to product improvements or other reasons. It is therefore recommended that customers contact Mitsubishi Electric Corporation or an authorized Mitsubishi Semiconductor product distributor for the latest product information before purchasing a product listed herein.

The information described here may contain technical inaccuracies or typographical errors. Mitsubishi Electric Corporation assumes no responsibility for any damage, liability, or other loss arising from these inaccuracies or errors.

Please also pay attention to information published by Mitsubishi Electric Corporation by various means, including the Mitsubishi Semiconductor home page (<http://www.mitsubishichips.com>).

When using any or all of the information contained in these materials, including product data, diagrams, charts, programs, and algorithms, please be sure to evaluate all information as a total system before making a final decision on the applicability of the information and products. Mitsubishi Electric Corporation assumes no responsibility for any damage, liability or other loss resulting from the information contained herein.

Mitsubishi Electric Corporation semiconductors are not designed or manufactured for use in a device or system that is used under circumstances in which human life is potentially at stake. Please contact Mitsubishi Electric Corporation or an authorized Mitsubishi Semiconductor product distributor when considering the use of a product contained herein for any specific purposes, such as apparatus or systems for transportation, vehicular, medical, aerospace, nuclear, or undersea repeater use.

The prior written approval of Mitsubishi Electric Corporation is necessary to reprint or reproduce in whole or in part these materials.

If these products or technologies are subject to the Japanese export control restrictions, they must be exported under a license from the Japanese government and cannot be imported into a country other than the approved destination. Any diversion or reexport contrary to the export control laws and regulations of Japan and/or the country of destination is prohibited.

Please contact Mitsubishi Electric Corporation or an authorized Mitsubishi Semiconductor product distributor for further details on these materials or the products contained therein.
