

## 25-32GHz Single Side Band Mixer

### GaAs Monolithic Microwave IC

#### Description

The CHM1291 is a multifunction chip (MFC) which integrates a LO buffer amplifier and a sub-harmonically balanced diodes mixer for 2LO suppression and image rejection. It is usable both for up-conversion and down-conversion. It is designed for a wide range of applications, typically commercial communication systems for broadband local access (LMDS). The backside of the chip is both RF and DC grounded. This helps simplify the assembly process.

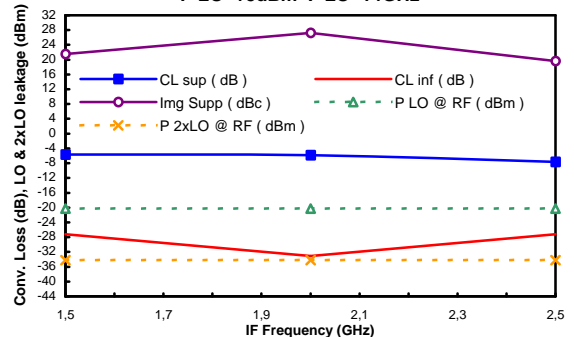

The circuit is manufactured with a P-HEMT process, 0.25µm gate length, via holes through the substrate, air bridges and electron beam gate lithography. It is available in chip form.

(1) With external quadrature hybrid coupler (reference on request). The minimal value depends on the quality of the external quadrature combiner.

(2) A bonding wire of typically 0.1 to 0.15nH will improve the accesses matching.

Current source biasing network is recommended.
