# 372.50 MHz One Port SAW Resonator

VANLONG

- Ideal for 372.50 MHz Transmitters
- Very Low Insertion Loss
- Quartz Stability
- Ultra Miniature Ceramic SMD Package (QCC4A)

# SR5428

| Absolute Maximum Rating (Ta=25°C) |                 |           |      |  |  |
|-----------------------------------|-----------------|-----------|------|--|--|
| Parameter                         |                 | Rating    | Unit |  |  |
| CW RF Power Dissipation           | Р               | 0         | dBm  |  |  |
| DC Voltage                        | V <sub>DC</sub> | ±30       | V    |  |  |
| Operating Temperature Range       | T <sub>A</sub>  | -10 ~ +60 | °C   |  |  |
| Storage Temperature Range         | $T_{\rm stg}$   | -40 ~ +85 | °C   |  |  |

NS = Not Specified

#### Note:

- 1. The frequency  $f_c$  is the frequency of minimum IL with the resonator in the specified test fixture in a 50 $\Omega$  test system with VSWR  $\leq$  1.2:1.
- 2. Unless noted otherwise, case temperature  $TC = +25^{\circ}C \pm 2^{\circ}C$ .
- Frequency aging is the change in fC with time and is specified at +65°C or less. Aging may exceed the specification for prolonged temperatures above +65°C. Typically, aging is greatest the first year after manufacture, decreasing in subsequent years.
- 4. Turnover temperature, T0, is the temperature of maximum (or turnover) frequency, f0. The nominal frequency at any case temperature, TC, may be calculated from:  $f = f_0 [1 FTC (T_0 T_c)^2]$ .
- 5. This equivalent RLC model approximates resonator performance near the resonant frequency and is provided for reference only. The capacitance  $C_0$  is the measured static (nonmotional) capacitance between input terminal and ground or output terminal and ground.

The measurement includes case parasitic capacitance.

- 6. Derived mathematically from one or more of the following directly measured parameters:  $f_c$ , *IL*, 3 dB bandwidth,  $f_c$  versus  $T_{C_1}$  and Co.
- 7. The specifications of this device are based on the test circuit shown above and subject to change or obsolescence without notice.
- 8. Typically, equipment utilizing this device requires emissions testing and government approval, which is the responsibility of the equipment manufacturer.
- Our liability is only assumed for the Surface Acoustic Wave (SAW) component(s) per se, not for applications, processes and circuits implemented within components or assemblies.
- 10. For questions on technology, prices and delivery, please contact our sales offices or e-mail to sales@vanlong.com.
