Product Specification

10Gb/s 120km Telecom CMLTM Transmitter Optical Sub-Assembly (TOSA)

DM80-02-0/1/2

PRODUCT FEATURES

- High Performance CMLTM
- Supports multi-bit-rate application, from 9.95Gb/s to 11.1Gb/s
- Supports link length up to 120km without DCM
- 4-7dBm modulated output power
- Case temperature range -5°C to 75°C
- Supports application with and without FEC
- TDM, DWDM single channel
- Covers ITU-T C- and L-band channels (1527.773nm to 1605.744nm)

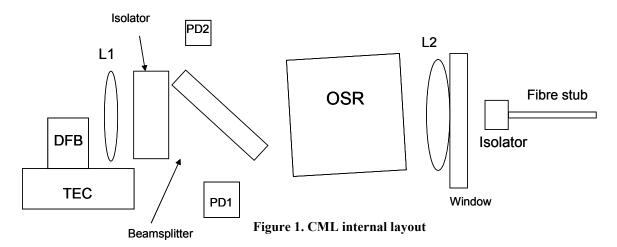

APPLICATIONS

- Metro, Regional and Long haul DWDM application
- SONET/SDH OC-192, STM-64
- 10G Ethernet
- 10X Fibre Channel
- XFP, X2, Xenpak

Finisar's DM80-02 transmitter optical sub-assembly (TOSA) employs proprietary Chirp Managed Laser (CMLTM) technology and has been specifically designed to transmit 10Gb/s data over physical distances up to 120km. The module is comprised of a directly-modulated DFB laser chip and a co-packaged proprietary optical spectrum reshaper (OSR) passive optical element. The OSR component also provides a frequency locking function and allows operation on the ITU-T channels within ±2.5GHz with coverage across both C-band and L-band for DWDM versions. Also included in this TOSA package are 2 photo-detectors for power control and wavelength locking, together with 2 TECs for temperature stabilization. The miniature size of this TOSA ensures it suitable for integration into XFP, X2, Xenpak and other transceiver modules. Key specifications for the optical and electrical characteristics, physical requirements, environmental conditions and reliability/quality requirements are detailed in this document.

Note: Long version of this document with more detailed optical and electrical parameter specification is available upon request.

I. Internal Optical Layout

The DM80-02 modules uses a 10Gb/s directly modulated DFB chip co-packaged with an optical spectral re-shaper (OSR) element as shown in Figure 1. An optical isolator is included between the DFB and the OSR while a beam-splitter component and 2 photodetectors are configured to allow frequency locking. Lens#1(L1) is used to collimate the DFB laser output and pass the beam through the splitter and OSR, prior to coupling into single-mode fiber using Lens#2 (L2). A second isolator is included in the fiber pigtail to minimize the effect of external back-reflections on module performance.

II. Control Method

The schematic in Figure 2 shows the key components and control loops that are used to operate the module. The output power of the DFB is monitored by photodetector PD1. Photodetector PD2 monitors the back-reflection from the OSR. The photocurrent ratio from the two detectors is used to lock the relative spectral locations of the laser and the OSR via temperature control of the DFB using TEC#1. A second TEC (TEC#2) controls the temperature of the OSR and locates the operating point of the OSR on the ITU grid for DWDM applications.

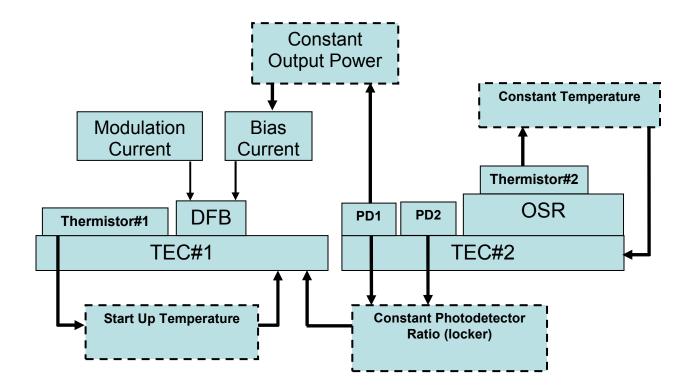

Figure 2: Control schematic for DM80-02 Module

III. Absolute Maximum Ratings

Table 1: Absolute maximum ratings

| Item | Parameters | Conditions | Min | Max | Units |
|------|-------------------------------|-------------------------|------|-----|-------|
| 1. | Storage Temperature | | -40 | 85 | °C |
| 2. | Heat Soldering Temperature | on leads, 6 seconds max | | 260 | °C |
| 3. | Returned Fiber Power | CW, 1 second transient | | 13 | dBm |
| 4. | Laser Forward Current | Peak | | 200 | mA |
| 5. | Laser Reverse Voltage | Peak | | 2 | V |
| 6. | PD Forward Current | CW | | 1 | mA |
| 7. | PD Reverse Voltage | CW | | 2 | V |
| 8. | TEC Current | DC | -1.9 | 1.9 | A |
| 9. | TEC Voltage | DC | | 1.8 | V |
| 10. | Transient Cooler Current | 1 sec | -1.9 | 1.9 | A |
| 11. | Tolerable External Reflection | | | -14 | dB |
| 12. | Optical Return Loss | | | -27 | dB |

IV. Standard Operating Specifications

Table 2: Standard Operating Requirements

| Item | Parameters | Min | Тур | Max | Units | Comments |
|------|--|------|------------|------|-----------|---|
| 1. | Bit Rate | | 9.953/10.7 | 11.1 | Gb/s | All the following transmission parameters are tested at 9.95 or 10.7Gb/s |
| 2. | Operating Case Temperature Range | -5 | | 75 | °C | |
| 3. | Wavelength (SOL) | | ITU-T Grid | | GHz | ITU-T wavelength grids defined in Tables 9 & 10 |
| 4. | Locked deviation from ITU | -2.5 | | 2.5 | GHz | EOLOT |
| 5. | Modulated Output Power (EOL) | 4 | | 7 | dBm | SOL operation condition to be discussed. |
| 6. | Operating Drive current (SOL) | 70 | | 100 | mA | |
| 7. | Allowed Deviation from SOL drive current over life and temperature | -15 | | 20 | % | |
| 8. | Required Resolution of Operating Drive Current | | | 0.09 | mA | 360mA/4096 levels |
| 9. | SMSR | 35 | 40 | | dB | |
| 10. | Wavelength temperature tuning coefficient | | 0.1 | | nm/°C | |
| 11. | Wavelength current tuning coefficient | | 7 | | pm/m A | |
| 12. | | | | 25 | mA | |
| 13. | Forward Bias Voltage | | | 1.8 | V | |
| | RIN | | | -135 | dB/Hz | 0 to 10 GHz, Measured before OSR is installed |
| 15. | Laser CW Linewidth (FWHM) | | 2 | 10 | MHz | Measured before OSR |
| 16. | Module Input Impedance | | 50 | | Ohms | Recommend use of EML driver technology |
| 17. | Peak to Peak voltage, Vpp | 1.2 | 1.8 | 2.5 | V | Into 50ohm |
| 18. | Electrical input crossing | 25 | | 80 | % | Customer must provide adjustment capability on electrical driver |
| 19. | Extinction Ratio (EOLOT) | 9 | | | dB | BT Filter OFF |
| 20. | Optical crossing | tbc | | tbc | % | BT Filter OFF |
| 21. | S11 | Mask | | | dB | tbc |

| 23. | Power dispersion Penalty @ 30dB OSNR, 9.95Gbs, | | | 2 | dB | Receiver threshold optimized for |

| | BER=10 ⁻¹² , 1600ps/nm | | | | transmission, to be |
|----|-----------------------------------|--|---|----|---------------------|
| | (EOLOT) ¹ | | | | discussed |
| | OSNR dispersion Penalty | | | | Receiver threshold |
| 24 | @ BER=10 ⁻⁴ , 10.7Gbs, | | 2 | dB | optimized at BB and |
| | 1600ps/nm (EOLOT) 1 | | | | 1600ps/nm |

Note:

1. Please call Finisar to discuss the receiver configuration, including types of PIN/APD, and power level into APD, and the type of CDRs are used. 2400ps/nm transmission is possible with trade-off between back-to-back eye diagram and transmission performance; DM80-01 is also compliant with the newly accepted ITU 10Gbps 120km standard P1V1-2C2

V. Mechanical Details

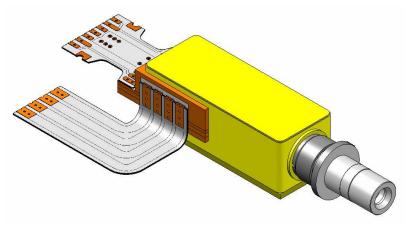

Figure 3: TOSA Package Profile

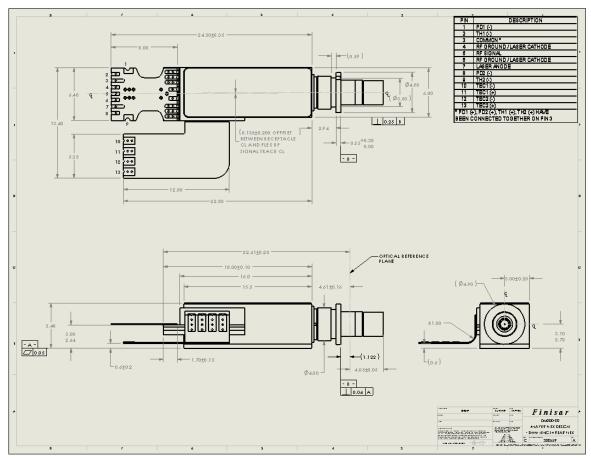

Figure 4: TOSA Package Outline Dimensions

V.1 Flex Cables and Signal Connections

This TOSA has 2 flex cables. The rear flex cable has 9 connections including a high speed ground-signal-ground coplanar waveguide, located in the middle of the cable, for delivery of high speed data signals. The side flex has 4 connections for high current TEC signals.

Table 8: Signal Connection Description

| Pin | Description | | |
|-----|------------------------------|--|--|
| 1. | PD1 (-) | | |
| 2. | Thermistor#1 (-) | | |
| 3. | Common | | |
| 4. | RF Ground/Laser Cathode | | |
| 5. | RF Signal | | |
| 6. | RF Ground/Laser Cathode | | |
| 7. | Laser Anode for Bias Current | | |
| 8. | PD2 (-) | | |
| 9. | Thermistor#2 (-) | | |
| 10. | TEC 1 (-) | | |

| 11. | TEC 1 (+) |
|-----|-----------|
| 12. | TEC 2 (-) |
| 13. | TEC 2 (+) |

V.2 Connector Options

LC receptable is currently. SC receptable is possible. Please contact Finisar for request.

V.3 10Gb/s Signal Delivery - RF Connection

The RF connection is through the ground-signal-ground coplanar structure on the rear flex cable.

VI. Wavelength Coverage

Table 4: DWDM Product Identification C-Band 100 GHz

| | Channel | Frequency | Wavelength | Channel | Frequency | Wavelength |

VII. Quality and Reliability

Lifetime

The operating lifetime of the module is 15 years. The reliability target is 400 FITs mean over 15 years to include random and wear out failures, valid for high-end of case temperature range. All specifications apply over this period of time.

Qualification

The DM80-02 module is being qualified in accordance with the Telcordia standard GR-468-CORE. The qualification report will be available upon request once the qualification test is completed.

Electro-Static Discharge (ESD)

The device meets the ESD Class 3 requirements of the Telcordia standard TR-NWT-000870 Issue 1, dated February 1991.

VIII. Order Information

Product code

For the product specified in this document, the proper product code shall be: DM80-02-1 (or, -0, -2)-xxxx-3-RC-yyyy

This product code should be specified when placing a purchase order.

- "01" indicates a butterfly box module as specified in this document.
- "1" indicates the laser wavelength will be specified on 100GHz ITU grid as specified in Table 9 and Table 10. If -"0" is specified, it can be a TDM version with any wavelength within C or L band, but not guaranteed on ITU grids. -"2" can also be specified for 50GHz ITU grid.
- "xxxx" is the channel ID as specified in Table 9 and Table 10.
- "3" indicates modulated output power range is between 4-7dBm. Please contact Finisar if different power level is needed.
- "RC" indicates the optical connector type is a receptable, currently an LC receptable. If other type connector is required, please contact Finisar.
- "yyyy" indicates any special customized request and need to be agreed with Finisar prior to ordering
