

Dolby* B Type Noise Reduction System

Description

CXA1100, CXA1101, CXA1102 and CXA1163 are ICs including two separate Dolby B type noise reduction processors. Seven devices with four Dolby levels and two types of package are provided for various applications. These devices feature very few external components, which is achieved by integrated filter circuits using integrated thin film capacitors with high capacitance.

16 pin DIP (Plastic)

16 pin SOP (Plastic)

Features

- Minimum number of external components
- NR ON/OFF and REC/PB switches included
- Small package (DIP16, SOP16)
- Small supply current ($\approx 5.5\text{mA}$, Typ.)
- Dual channel processors in one chip

Absolute Maximum Ratings (Ta = 25°C)

- Supply voltage V_{CC} 17 V
- Operating temperature T_{opr} -30 to +85 °C
- Storage temperature T_{stg} -55 to +150 °C
- Allowable power dissipation P_D
 - DIP16 (A1100P/A1101P/A1102P/A1163P) 900 mW
 - SOP16 (A1101M/A1102M/A1163M) 500 mW

Note 1) These ICs are available only to the licensees of Dolby Laboratories Licensing Corporation from whom licensing and application information may be obtained.

Note 2) "Dolby" and double D symbols are trademarks of Dolby Laboratories Licensing Corporation.

Sony reserves the right to change products and specifications without prior notice. This information does not convey any license by any implication or otherwise under any patents or other right. Application circuits shown, if any, are typical examples illustrating the operation of the devices. Sony cannot assume responsibility for any problems arising out of the use of these circuits.

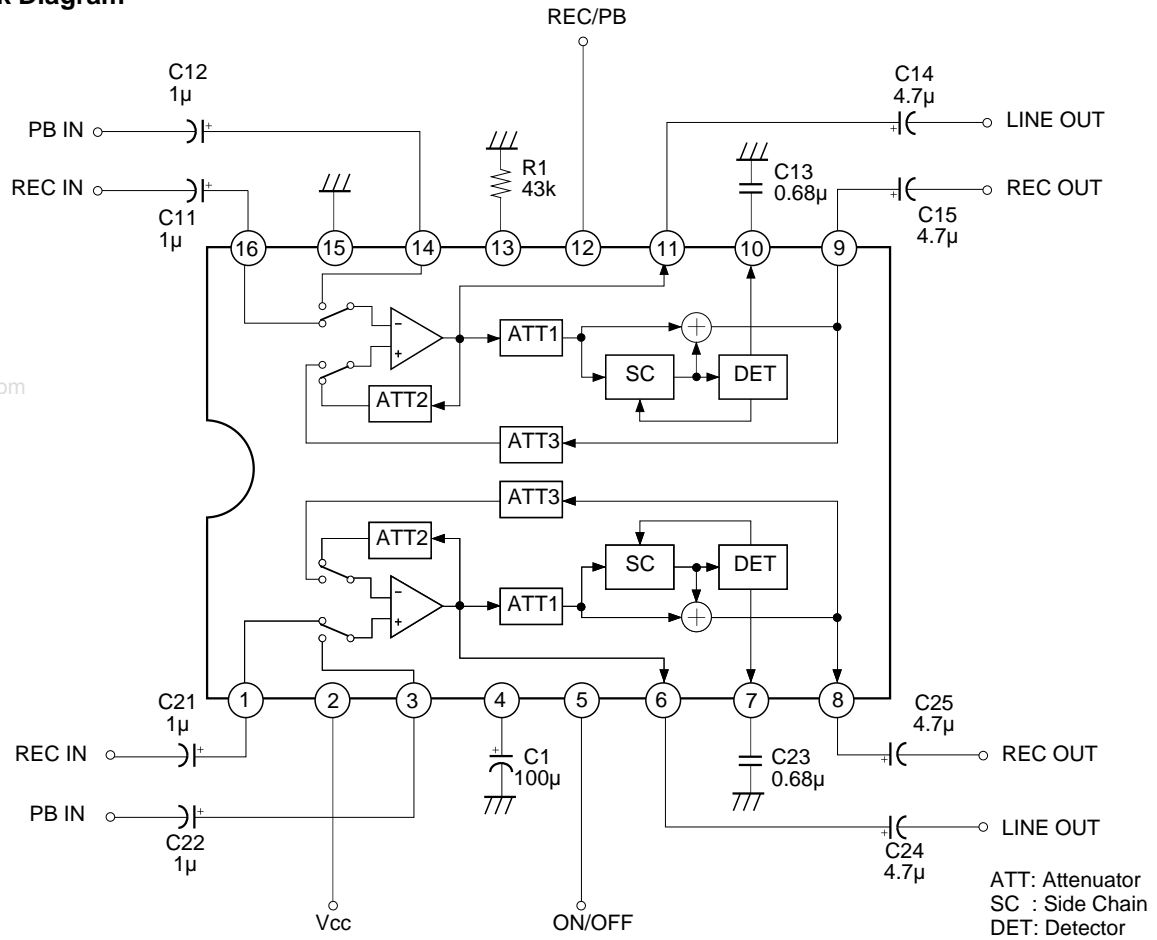

Pin Description

(Ta = 25°C, Vcc = 12V (Single supply), No signal)

No.	Symbol	Z (in)	VDC	Equivalent Circuit	Description
1, 16	REC IN	40kΩ	6.0V		Recording (Encode) input
2	Vcc	—	12.0V		Power supply
3, 14	PB IN	40kΩ	6.0V		Playback (Decode) input
4	Vcc/2	1kΩ	6.0V		Single supply → Vcc/2 Split supply → Ground
5	ON/OFF	—	—		Mode control pin for NR ON/OFF "H" → NR OFF "L" → NR ON
6, 11	LINE OUT	—	6.0V		Line (Decode) output

No.	Symbol	Z (in)	VDC	Equivalent Circuit	Description
7, 10	TC	—	0.3V		Time constant pin for the level detector
8, 9	REC OUT	—	6.0V		Recording (Encode) output
12	REC/PB	—	—		Mode control pin for REC/PB (Encode/Decode) "H" → B (Decode) "L" → EC (Encode)
13	IREF	—	1.2V		Reference current input pin for the active filters
15	GND	—	0V		Single supply → Ground Split supply → V _{EE}

Notes on Applications

1) Power supply

The CXA1100 Series is basically designed to operate on single ended supply. The split supply operation is also possible, however, V_{EE} (negative) supply should provide low noise and ripple characteristics. The ripple rejection ratio of these devices is generally good for V_{CC} supply (single ended supply and split supply), however, that for V_{EE} supply is not so good in the NR on mode because the integrated capacitors for the side chain filter are connected to pin 15 (V_{EE} on split supply).

When the ripple or noise component of V_{EE} supply is not negligible small, the CR filter shown in Fig. a-1 will be usefull.

The operation voltage range are

CXA1100	11.5 to 16V (± 5.75 to $\pm 8V$)
CXA1101	8.5 to 16V (± 4.25 to $\pm 8V$)
CXA1102	6.5 to 16V (± 3.25 to $\pm 8V$)
CXA1163	5.0 to 16V (± 2.5 to $\pm 8V$)

Fig. a-1.

The devices will satisfy the signal handling of 12dB specified by Dolby Laboratories on above voltage range.

2) Operation mode control

The CXA1100 series provide fully electronic switching circuits. The functions are controlled by DC voltages of the two control pins of REC/PB (pin 12) and ON/OFF (pin 5). The switching truth tables are shown in Fig. a-2.

V_H and V_L are defined as

(a) Single ended supply operation

$$V_{CC} \geq V_H \geq 2.5V$$

$$0.5V \geq V_L \geq 0V$$

(b) Split supply operation

$$V_{CC} \geq V_H \geq V_{EE} + 2.5V$$

$$V_{EE} + 0.5V \geq V_L \geq V_{EE}$$

REC/PB	V_H	V_L
Function	PB (Decode)	REC (Encode)

ON/OFF	V_H	V_L
Function	NR off	NR on

Fig. a-2.

It is desirable to provide CR time constant circuits at the mode control pins with time constant from 100msec to 1sec, which will reduce switching clicks effectively.

3) Reference levels

Characteristics and specifications of the Dolby noise reduction processor are defined as the levels and measured with reference to the Dolby level. This particular level in these devices is $-10dBm$ (245mVrms), and is measured at the recording output (REC OUT) in the NR off mode.

The reference levels of the recording input (REC IN), play back input (PB IN) and line output (LINE OUT) are defined the levels which provide the Dolby level at the recording output in the NR off mode.

The CXA1100 series has a common silicon die, and has different internal connection. The series provides four different line output levels for various applications. Other reference levels, recording input level, playback input level and recording output level (= Dolby level) are identical in all devices.

The reference levels are as follows

Recording output level (= Dolby level)		$-10dBm$ (245mVrms)
Recording input level		$-30dBm$ (24.5mVrms)
Play back input level		$-30dBm$ (24.5mVrms)
Line output level	CXA1100	0dBm (775mVrms)
	CXA1101	$-3dBm$ (548mVrms)
	CXA1102	$-6dBm$ (388mVrms)
	CXA1163	$-10dBm$ (245mVrms)

4) MPX filter termination and C₁ for V_{cc}/2 (Pin 4)

The MPX (multiplex) filter termination method shown in Fig. a-3 allows saving the coupling capacitors between the buffer amplifiers and MPX filters. However, the channel to channel separation and REC to PB crosstalk of low frequency signals will be degraded by the termination resistor R_T. For example, 5kΩ of R₁ will degrade the channel to channel separation to 50dB. Better separation can be obtained by increasing the capacitance of C₁ (Pin 4) to 220μF or 470μF.

The allowable minimum value of C₁ is 47μF, and 100μF is the standard recommended value. Larger values of C₁ are generally desirable in order to improve the crosstalk and ripple rejection ratio.

5) Application for dubbing cassette decks

The CXA1100 series generates non decoded signal at the recoding output in the decode mode, and can simplify the structure of dubbing decks. See the SONY' Dolby B/C type IC (CX20187/CXA1097Q or CX20188/CXA1098Q) data sheet in detail.

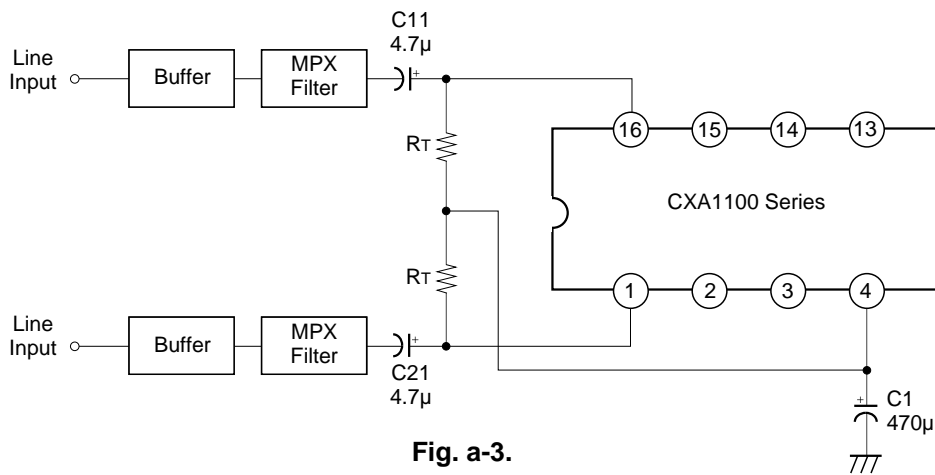

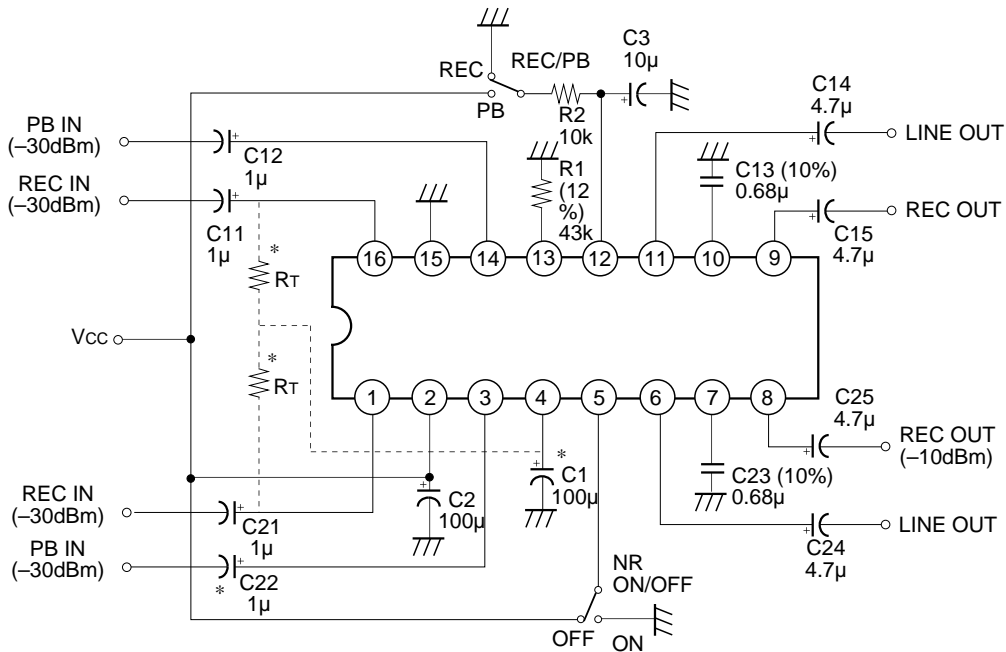

Fig. a-3.

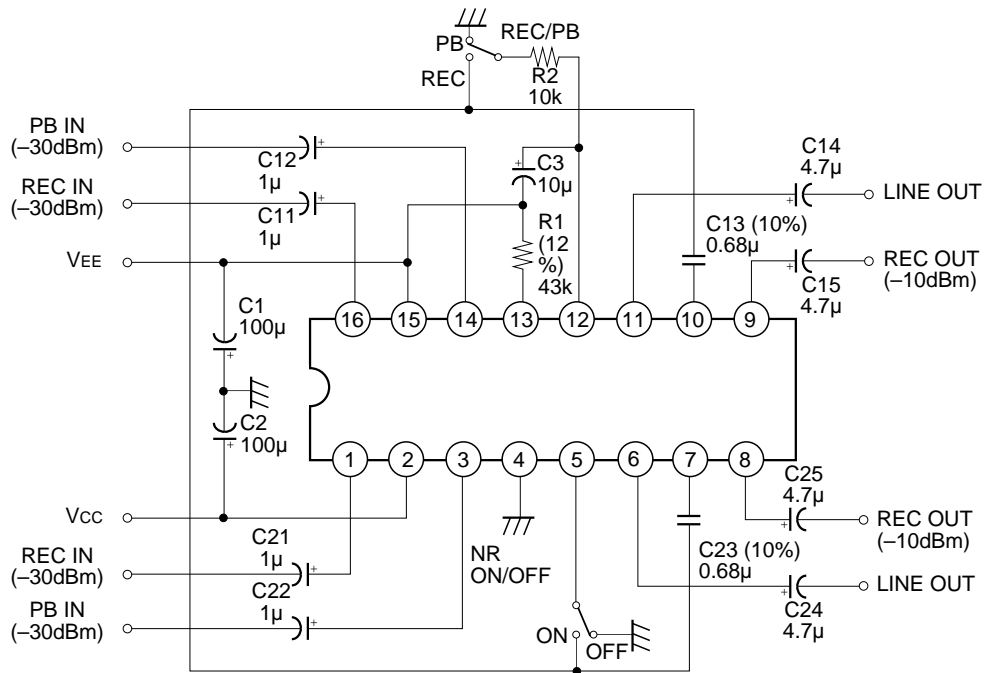

Switchable Processor with Single Supply

Note 1) Resistor and capacitor tolerances are ±10% and ±20% respectively unless otherwise specified.

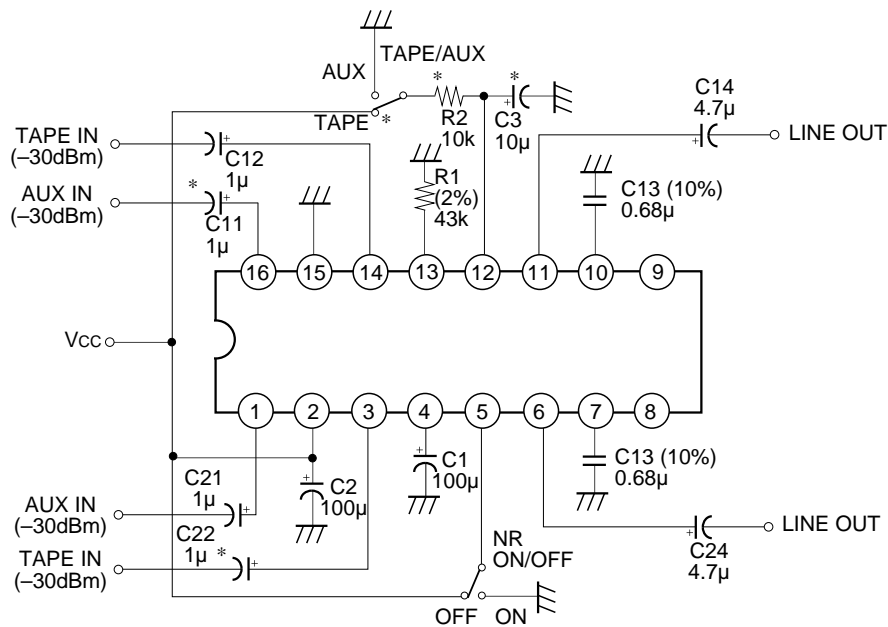

Note 2) When resistors R_T are connected to Pin 4 for the MPX filter termination, increase the capacitances of C₁ and C₁₁ (C₂₁) to 470μF and 4.7μF respectively.

Switchable Processor with Split Supply

Note 1) Resistor and capacitor tolerances are $\pm 10\%$ and $\pm 20\%$ respectively unless otherwise specified.

Playback Processor with AUX input

Note 1) Resistor and capacitor tolerances are $\pm 10\%$ and $\pm 20\%$ respectively unless otherwise specified.

Note 2) When AUX inputs are not necessary, reject R₂, C₃, C₁₁, C₂₁ and TAPE/AUX switch, and connect Pin 12 to Vcc.
