

Step-Down DC/DC Controller with Shutdown

■ FEATURES

- Operating Voltage up to 15V.
- Simple Voltage-Mode PWM Control.
- Fast Transient Response.
- 2V and 1.3V \pm 2% Feedback Voltage Reference Options.
- Adjustable Current Limit without External Sense Resistors.
- 200 KHz Switching Oscillator.
- Short-Circuit Protection with Low Short-Circuit Output Current.
- Low Shutdown Current
- Built-in Soft Start.

■ APPLICATIONS

- Power Supply for Motherboard V_{GTL} (1.5V Output)
- Power Supply for Motherboard $V_{I/O}$.
- High-Power 5V to 3.xV DC/DC Regulators.
- Low-Voltage Distributed Power Supplies.

■ DESCRIPTION

The SS6580 is a high-power, high-efficiency voltage-mode switching regulator controller for motherboard $V_{I/O}$ power supply applications. Designed to drive an N-channel MOSFET in a standard buck topology, the SS6580 features a high voltage CMOS output driver with short-circuit protection in an 8-pin package.

An external 4-bit Digital-to-Analog Converter (DAC) can be used along with the SS6580 to adjust the output voltage from 2.0V to 3.5V in 0.1V increments. Table 1 on the following page specifies the corresponding output voltage for 16 combinations of DAC inputs as shown in the typical application circuit.

The 200 KHz switching frequency allows the use of small external components while maintaining high conversion efficiency. The 11MHz bandwidth and the 6V/ μ S slew rate of the error amplifier ensure high converter bandwidth and fast transient response.

The SS6580 provides both adjustable over-current and adjustable short-circuit protection by sensing the output current across the on-resistance of the external N-channel MOSFET, rather than an external low value sense resistor.

The SS6580L provides a lower reference voltage (1.30V) than the default SS6580 (2.00V) for lower V_{OUT} requirements.

ORDERING INFORMATION

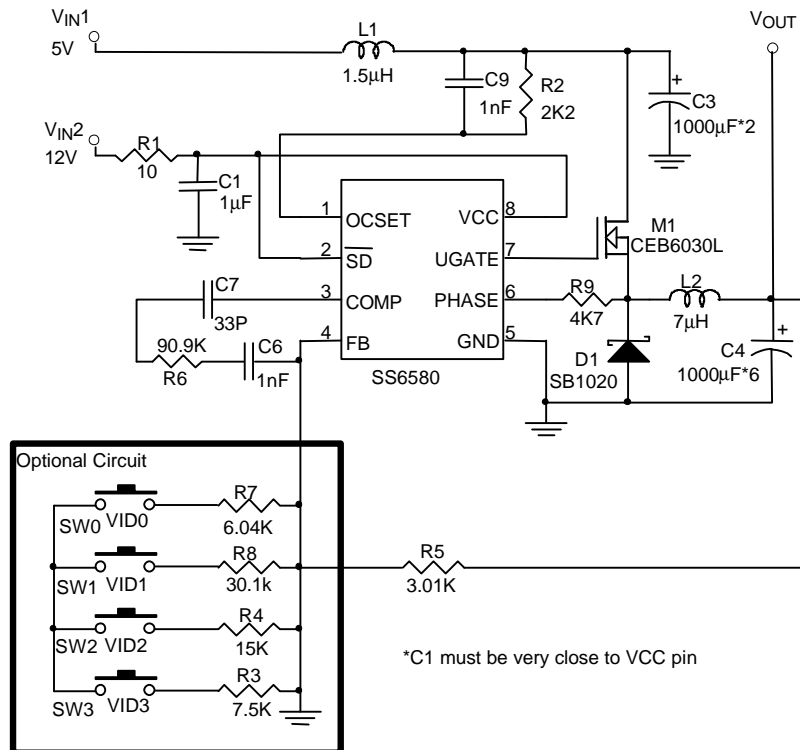

SS6580XCXXX

Example: SS6580CSTR

→ 2.00V in SO-8 Package & Tape & Reel Packing Type
(CN is not available in TR packing)

0	1	1	0	2.90V
0	1	0	1	3.00V
0	1	0	0	3.10V
0	0	1	1	3.20V
0	0	1	0	3.30V
0	0	0	1	3.40V
0	0	0	0	3.50V

■ ABSOLUTE MAXIMUM RATINGS

Supply Voltage, V_{CC} 15V
 Input, Output, or I/O Voltage GND-0.3V to VCC+0.3V
 ESD Classification Class 2

Recommended Operating Conditions

Supply Voltage, V_{CC} 12V \pm 10%
 Ambient Temperature Range 0°C~70°C
 Junction Temperature Range 0°C~ 100°C

Thermal Information

Thermal Resistance, θ_{JA} (Typical, Note 1)
 SOIC Package 100°C/W
 SOIC Package (with 3 in² of Copper) 90°C/W
 Maximum Junction Temperature (Plastic Package) 150°C
 Maximum Storage Temperature Range -65°C~150°C
 Maximum Lead Temperature (Soldering 10 Sec) 300°C
 Note 1: θ_{JA} is measured with the component mounted on an evaluation PC board in free air.

TEST CIRCUIT

Refer to TYPICAL APPLICATION CIRCUIT.

ELECTRICAL CHARACTERISTICS ($V_{CC}=12V$, $T_A=25^{\circ}C$, unless otherwise specified.)

■ BLOCK DIAGRAM

■ PIN DESCRIPTIONS

PIN 1: OCSET - Current limit sense pin. Connect a resistor R_{OCSET} from this pin to the drain of the external MOSFET. R_{OCSET} , an internal $200\mu A$ current source (I_{OCSET}), and the external MOSFET on-resistance ($R_{DS(ON)}$) jointly set the over-current trip point according to the following equation:

$$I_{PEAK} = \frac{I_{OCSET} \times R_{OCSET}}{R_{DS(ON)}}$$

If the FB pin voltage is sensed to be below 50% of the internal voltage reference V_{DAC} , the over-current comparator cycles the soft-start function.

PIN 2: \overline{SD} - Shutdown pin. Connect this pin to ground for shutdown.

PIN 3: COMP - External compensation pin. This pin is connected to the error amplifier output and PWM comparator. An RC network is

connected to the FB pin to compensate the voltage-control feedback loop of the converter.

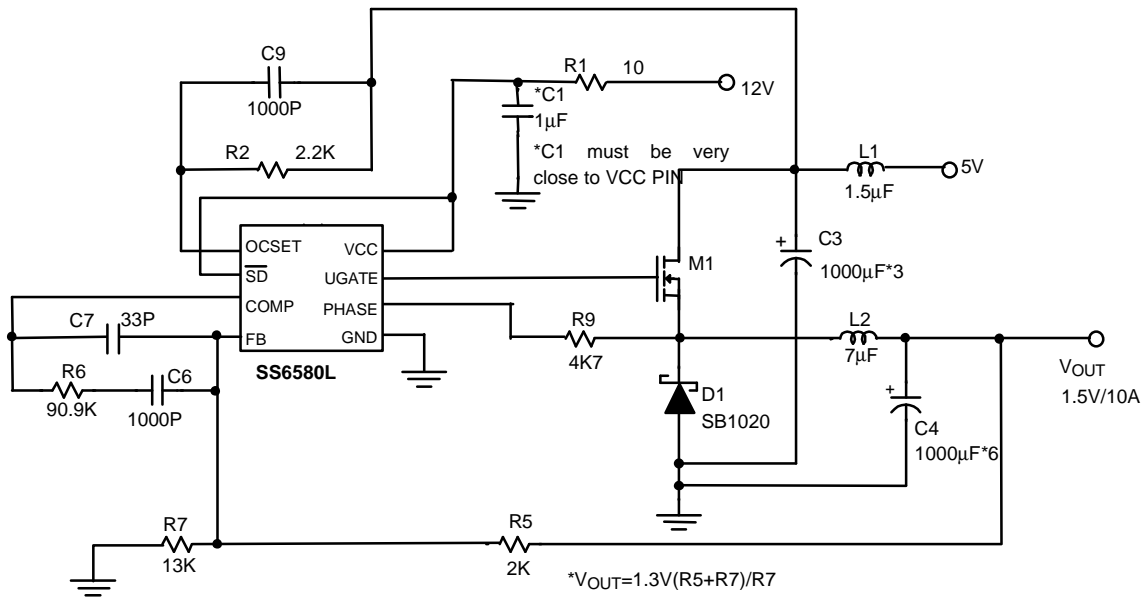

PIN 4: FB - The error amplifier inverting input pin. The FB pin and COMP pin are used to compensate the voltage-control feedback loop.

PIN 5: GND - Ground pin.

PIN 6: PHASE - Over-current detection pin. Connect the PHASE pin to the source of the external N-MOSFET. This pin detects the voltage drop across the MOSFET $R_{DS(ON)}$ for over-current protection.

PIN 7: UGATE - External MOSFET gate drive pin. Connect this pin to the gate of the external MOSFET.

PIN 8: VCC - The chip power supply pin. Recommended supply voltage is 12V.
