

## FDC6321C Dual N & P Channel , Digital FET

## **General Description**

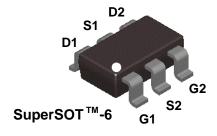

These dual N & P Channel logic level enhancement mode field effect transistors are produced using Fairchild's proprietary, high cell density, DMOS technology. This very high density process is especially tailored to minimize on-state resistance. This device has been designed especially for low voltage applications as a replacement for digital transistors in load switching applications. Since bias resistors are not required this dual digital FET can replace several digital transistors with different bias resistors.

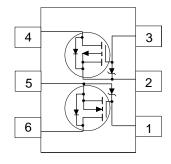

#### **Features**

- N-Ch 25 V, 0.68 A,  $R_{DS(ON)} = 0.45 \Omega$  @  $V_{GS} = 4.5 V$
- P-Ch -25 V, -0.46 A,  $R_{DS(ON)} = 1.1 \Omega$  @  $V_{GS} = -4.5 V$ .
- Very low level gate drive requirements allowing direct operation in 3 V circuits. V<sub>GS(th)</sub> < 1.0V.</li>
- Gate-Source Zener for ESD ruggedness.
   >6kV Human Body Model
- Replace multiple dual NPN & PNP digital transistors.

Mark:.321

## **Absolute Maximum Ratings** $T_A = 25^{\circ}\text{C}$ unless other wise noted

Symbol	Parameter	N-Channel	P-Channel	Units

2. Pulse Test: Pulse Width  $\leq$  300 $\mu$ s, Duty Cycle  $\leq$  2.0%.

a. 140°C/W on a 0.125 in² pad of 2oz copper.

b. 180°C/W on a 0.005 in² of pad of 2oz copper.

Notes:

1. R<sub>p,n</sub> is the sum of the junction-to-case and case-to-ambient thermal resistance where thecase thermal reference is defined as the solder mounting surface of the drain pins. R<sub>p,ic</sub> is guaranteed by design while R<sub>p,ic</sub> is determined by the user's board design.

#### **DISCLAIMER**

FAIRCHILD SEMICONDUCTOR RESERVES THE RIGHT TO MAKE CHANGES WITHOUT FURTHER NOTICE TO ANY PRODUCTS HEREIN TO IMPROVE RELIABILITY, FUNCTION OR DESIGN. FAIRCHILD DOES NOT ASSUME ANY LIABILITY ARISING OUT OF THE APPLICATION OR USE OF ANY PRODUCT OR CIRCUIT DESCRIBED HEREIN; NEITHER DOES IT CONVEY ANY LICENSE UNDER ITS PATENT RIGHTS, NOR THE RIGHTS OF OTHERS.

#### LIFE SUPPORT POLICY

FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF FAIRCHILD SEMICONDUCTOR CORPORATION. As used herein:

- 1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, or (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in significant injury to the user.
- A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.

### PRODUCT STATUS DEFINITIONS

#### **Definition of Terms**

Datasheet Identification	Product Status	Definition
Advance Information	Formative or In Design	This datasheet contains the design specifications for product development. Specifications may change in any manner without notice.
Preliminary	First Production	This datasheet contains preliminary data, and supplementary data will be published at a later date. Fairchild Semiconductor reserves the right to make changes at any time without notice in order to improve design.
No Identification Needed	Full Production	This datasheet contains final specifications. Fairchild Semiconductor reserves the right to make changes at any time without notice in order to improve design.
Obsolete	Not In Production	This datasheet contains specifications on a product that has been discontinued by Fairchild semiconductor. The datasheet is printed for reference information only.
