

Banjo Modular Adapters

circuit access

without disrupting

service

The Banjo Modular Adapters are designed to permit testing on working lines. They allow circuit access without disrupting service; sturdy copper contacts are angled to prevent alligator clips from falling off during testing. There are also small holes in each contact for the use of test probes. All circuits are clearly marked on sides and bottom of the Banjo adapters. The Banjo adapter is available in four, six, or eight wire configuration for voice and data applications. They have a heavy duty, molded-in clip for attaching to shirt pocket or tool pouch.

Features:

- Two models available: the Standard Modular Adapter and the Banjo Modular Adapter
- Standard Modular Adapter is economical, convenient, small, and has a handy pocket clip.
- Banjo Modular Adapters available with 4, 6, and 8 wire (RJ11, RJ45)
- Banjo Modular Adapters available with numbered contacts and no interruption of service design
- Durable, high impact plastic design; outside plant resistant
- Banjo Modular Adapter allows for replaceable line cords

Part Numbers:

- 4 Wire Standard Modular AdapterP/N 10113-000
- 4 Wire Banjo AdapterP/N 10210-100
- 6 Wire Banjo AdapterP/N 10220-100
- 8 Wire Banjo AdapterP/N 10230-100
- Replacement Cords:
- For use with 4 and 6 wire adaptersP/N 10200-000
- For use with 8 wire adaptersP/N 10300-000
