

**Package Dimension**

**Description**

The LPD2060 series are silicon planar P/N photodiodes incorporated in plastic package that simultaneously serve as filter and are also Transparent for infrared emission their terminals are soldering tabs arranged in 2.54mm center to center spacing due to their design the diodes can vertically be assembled on pc boards arrays can be realized by multiple arrangement versatile photodetectors are suitable for diodes as well as voltaic cell operation the signal noise ratio is particularly favorable even at low illuminance the P/N photodiode are outstanding for low junction capacitance high cut-off frequency and fast switching times.

They are particularly suitable for IR sound transmission and remote control the cathode of LPD2060 photodiode is marked by a stamping on the package edge

NOTE:1.All dimension are In millimeters tolerance is  $\pm 0.25$  unless otherwise noted
