

# SMT POWER INDUCTORS

## Toroid - SLIC Series

Fifteen package sizes

Current Rating: up to 23.8ADC

Frequency Range: up to 1MHz

# Pulse

A TECHNITROL COMPANY

### Electrical Specifications @ 25°C — Operating Temperature -40°C to +130°C<sup>6</sup>

#### NOTES:

- Reference values are for an inductor with a 55°C temperature rise. The core loss is 10% of the copper loss at the ET listed and 500kHz.
- Core does not saturate abruptly. The ET and DC current are limited by the desired inductance and temperature rise.
- In high volt-time applications, additional heating in the component can occur due to core losses in the inductor which may necessitate derating the current in order to limit the temperature rise of the component. In order to determine the approximate total losses (or temperature rise) for a given application, both copper and core losses should be taken into account.

#### Estimated Temperature Rise:

$$\text{Trise} = K3 * (\text{Coreloss}(W) + \text{Copperloss}(W))^{.833} (C)$$

$$\text{CopperLoss} = \text{Irms}^2 * \text{DCR\_Typical} (m\Omega) / 1000$$

$$\text{CoreLoss} = K2 * (\text{Freq\_kHz})^{1.26} * (\Delta B)^{2.11}$$

$$\Delta B = K1 * \text{Volt-}\mu\text{sec} * 100$$

- Optional Tape & Reel packaging can be ordered by adding a "T" suffix to the part number (i.e. PE-53600 becomes PE-53600T). Pulse complies to industry standard tape and reel specification EIA481.
- To order RoHS compliant part, add the suffix "NL" to the part number (i.e. PE-53600 becomes PE-53600NL and PE-53600T becomes PE-53600NLT).
- The temperature of the component (ambient plus temperature rise) must be within the stated operating temperature range.

### Mechanicals

#### High Current Inductors (HCI)

#### Low Current Inductors (LCI)

\* Dimension "C" is .400/10,16 for the marked models because of heavier wire gage.
