

SP8690 200MHz ÷ 10/11

SP8691 200MHz ÷ 8/9

The SP8690 and SP8691 are low power ECL variable modulus dividers, with both ECL10K and TTL/CMOS compatible outputs. They divide by the lower division ratio when either of the ECL control inputs, $\overline{PE1}$ or $\overline{PE2}$, is in the high state and by the higher ratio when both are low (or open circuit).

FEATURES

- ECL and TTL/CMOS Compatible Outputs
- AC-Coupled Input
- Control Inputs ECL Compatible

QUICK REFERENCE DATA

- Supply Voltage: $-5.2V \pm 0.25V$ (ECL), $5V \pm 0.25V$ (TTL)
- Power Consumption: 70mW (Typ.)
- Temperature Range:
 - 55°C to +125°C (A Grade)
 - 30°C to +70°C (B Grade)

ABSOLUTE MAXIMUM RATINGS

Supply voltage, $ V_{CC} - V_{EE} $	8V
ECL output current	10mA
Storage temperature range	-65°C to +150°C
Max. junction temperature	+175°C
TTL output voltage	+12V
Input voltage	2.5V p-p
Max. open collector current	15mA

ELECTRICAL CHARACTERISTICS

Unless otherwise stated, the Electrical Characteristics are guaranteed over specified supply, frequency and temperature range

ECL OPERATION

Supply voltage, $V_{CC} = 0V$, $V_{EE} = -5.2V \pm 0.25V$
 Temperature, $T_{AMB} = -55^{\circ}C$ to $+125^{\circ}C$ (A Grade), $-30^{\circ}C$ to $+70^{\circ}C$ (B Grade)

Characteristic	Symbol	Value		Units	Conditions	Notes
		Min.	Max.			
Maximum frequency (sinewave input)	f_{MAX}	200		MHz	Input = 400-800mV p-p	5
Minimum frequency (sinewave input)	f_{MIN}		40	MHz	Input = 400-800mV p-p	5
Power supply current	I_{EE}		21	mA	$V_{EE} = -5.0V$	5
ECL output high voltage	V_{OH}	-0.85	-0.7	V	$V_{EE} = -5.2V$ (25°C)	
ECL output low voltage	V_{OL}	-1.8	-1.5	V	$V_{EE} = -5.2V$ (25°C)	
PE input high voltage	V_{INH}	-0.93		V	$V_{EE} = -5.2V$ (25°C)	
PE input low voltage	V_{INL}		-1.62	V	$V_{EE} = -5.2V$ (25°C)	
Clock to ECL output delay	t_p		9	ns		6
Set-up time	t_s	3		ns		3, 6
Release time	t_r	8		ns		4, 6

TTL OPERATION

Supply voltage, $V_{CC} = 5V \pm 0.25V$, $V_{EE} = 0V$
 Temperature, $T_{AMB} = -55^{\circ}C$ to $+125^{\circ}C$ (A Grade), $-30^{\circ}C$ to $+70^{\circ}C$ (B Grade)

Characteristic	Symbol	Value		Units	Conditions	Notes
		Min.	Max.			
Maximum frequency (sinewave input)	f_{MAX}	200		MHz	Input = 400-800mV p-p	5
Minimum frequency (sinewave input)	f_{MIN}		40	MHz	Input = 400-800mV p-p	5
Power supply current	I_{EE}		21	mA	$V_{CC} = 5.0V$	5
TTL output low voltage	V_{OL}		0.5	V	$V_{CC} = 5V$, $R_L = 560\Omega$	5, 7
TTL output high voltage	V_{OH}	3.75		V	$R_L = 560\Omega$	5, 7
Clock to TTL output high delay, +ve going	t_{PLH}		32	ns	$R_L = 560\Omega$	6
Clock to TTL output low delay, -ve going	t_{PHL}		18	ns	$R_L = 560\Omega$	6
Set-up time	t_s	3		ns		3, 6
Release time	t_r	8		ns		4, 6

NOTES

- The temperature coefficients of $V_{OH} = +1.63mV/^{\circ}C$, $V_{OL} = +0.94mV/^{\circ}C$ and of $V_{IN} = +1.22mV/^{\circ}C$.
- The test configuration for dynamic testing is shown in Fig.8
- The set-up time t_s is defined as the minimum time that can elapse between L→H transition of control input and the next L→H clock pulse transition to ensure that division by the lower modulus is obtained.
- The release time t_r is defined as the minimum time that can elapse between H→L transition of control input and the next L→H clock pulse transition to ensure that division by the higher modulus is obtained.
- SP8690/1B tested at 25°C only.
- Guaranteed but not tested.
- The open collector output is not recommended for use at output frequencies above 15MHz. $C_{LOAD} \leq 5pF$.

OPERATING NOTES

1. The clock inputs can be single or differentially driven. The clock input is biased internally and is coupled to the signal source with a suitable capacitor. The input signal path is completed by an input reference decoupling capacitor which is connected to ground.
2. In the absence of a signal the device will self-oscillate. If this is undesirable, it may be prevented by connecting a 68kΩ resistor from the input to V_{EE} i.e., from pin 1 or pin 16 in pin 12. This reduces the input sensitivity by approximately 100mV.
3. The circuit will operate down to DC but slew rate must be better than 100V/μs.
4. The Q₄ and Q₄ outputs are compatible with ECLII but can be interfaced to ECL10K as shown in Fig. 9.

5. The PE inputs are ECLIII/10K compatible and include internal 10kΩ pull-down resistors. Unused inputs can therefore be left open circuit.
6. The input impedance of the SP8690/1 varies as a function of frequency. See Fig. 7.
7. The TTL/CMOS output is a free collector and the high state output voltage will depend on the supply that the collector load is taken to. This should not exceed 12V.
8. The rise/fall time of the open collector output waveform is directly proportional to load capacitance and load resistor value. Therefore, load capacitance should be minimised and the load resistor kept to a minimum consistent with system power requirements. In the test configuration of Fig. 8 the output rise time is approximately 10ns and the fall time
