

Dual operational amplifier

BA4558 / BA4558F / BA4558N

The BA4558, BA4558F, and BA4558N are monolithic ICs with two operational amplifiers featuring low power consumption and internal phase compensation mounted on a single silicon chip. These products offer high speed, a wide band width, and low noise.

Outstanding thermal characteristics and voltage gain band width make these ICs ideal for use in a wide variety of electronic circuits. The BA4558 comes in an 8-pin DIP package and is compatible with the 4558 operational amplifier. The BA4558F comes in an 8-pin SOP package, and the BA4558N in an 8-pin SIP package.

●Applications

- Active filters
- Audio amplifiers
- VCOs
- Other electronic circuits

●Features

- 1) Low power dissipation of approximately 50mW (typ.).
- 2) Built-in output short-circuit protection circuit.
- 3) Internal phase compensation.
- 4) No latch-up.
- 5) Wide range of common mode and differential voltage.
- 6) High gain and low noise.

(1) Unused circuit connections

If there are any circuits which are not being used, we recommend making connections as shown in Figure 9, with the non-inverted input pin connected to the potential within the in-phase input voltage range (V_{icm}).
